Changelog

One pane of glass for virtual machines across AWS, Azure, GCP, and OCI. Track CPU usage, network throughput, problem counts, and credit utilization side-by-side — without switching between cloud consoles.

Built for engineering teams running workloads on two or more cloud providers. Cut incident response time by seeing every provider's health, alerts, and resource trends in one consistent view — no custom scripting or manual data aggregation required.

Key Features

- ✓ Track CPU usage, network throughput, problem counts
- ✓ One pane of glass for virtual machines across AWS, Azure, GCP, and OCI
- ✓ Built for engineering teams running workloads on two or more cloud providers

Configuration & Installation

- step 1
- step 2
- step 3

Vendor Portal Access

Set up your vendor profile

Access your vendor profile, add your company description, logo, and contact details - this is what customers see on your marketplace listings.

Request profile review

Once your vendor profile is complete, request a review from our team. We will check the profile and make it visible to customers on the marketplace

Add your products

Add your Zabbix extensions to the marketplace. Include descriptions, screenshots, and downloadable file. Each product will be reviewed before becoming visible to customers.

Global Dashboard provides centralized AWS cost monitoring and analysis across multiple accounts and regions.

Features

- Multi-account and multi-region cost aggregation
- Cost trend analysis with daily, weekly, and monthly breakdowns
- Budget threshold alerting
- Tag-based cost allocation by team, project, or environment
- Top spenders identification by service and resource
- Reserved Instance and Savings Plans utilization tracking

AI

WHAT HAPPENED

The host DEMO-SERVER triggered a critical alert because its CPU load average reached 7.67.
This value exceeded the predefined monitoring threshold of 5.0 configured in the Zabbix trigger.
The event was generated due to high resource consumption detected on the monitored server.

Impact: High CPU load may degrade application performance and increase response times on this server.

Summarize what happened and the impact in three concise bullet points. No commands.

— ZABBIX MARKETPLACE MODULE BY APLITT —

Automated Network Maps.

All you need is Zabbix.

- **LLDP, CDP and VMware discovery** — links draw themselves
- **Live link details** — ports, speed, traffic, state
- **Fast problem detection** — intuitive tooltips
- **Respects Zabbix user privileges** — role-based access
- **Easy to deploy** — on the Zabbix you already run

~50 functionalities. A live representation of your IT infrastructure.

IntelliTrend Advanced Services

Advanced service monitoring with a clear view of dependencies and live status.

Easy configuration

Connect hosts and host groups, even when dependencies are complex.

Real-time visualization

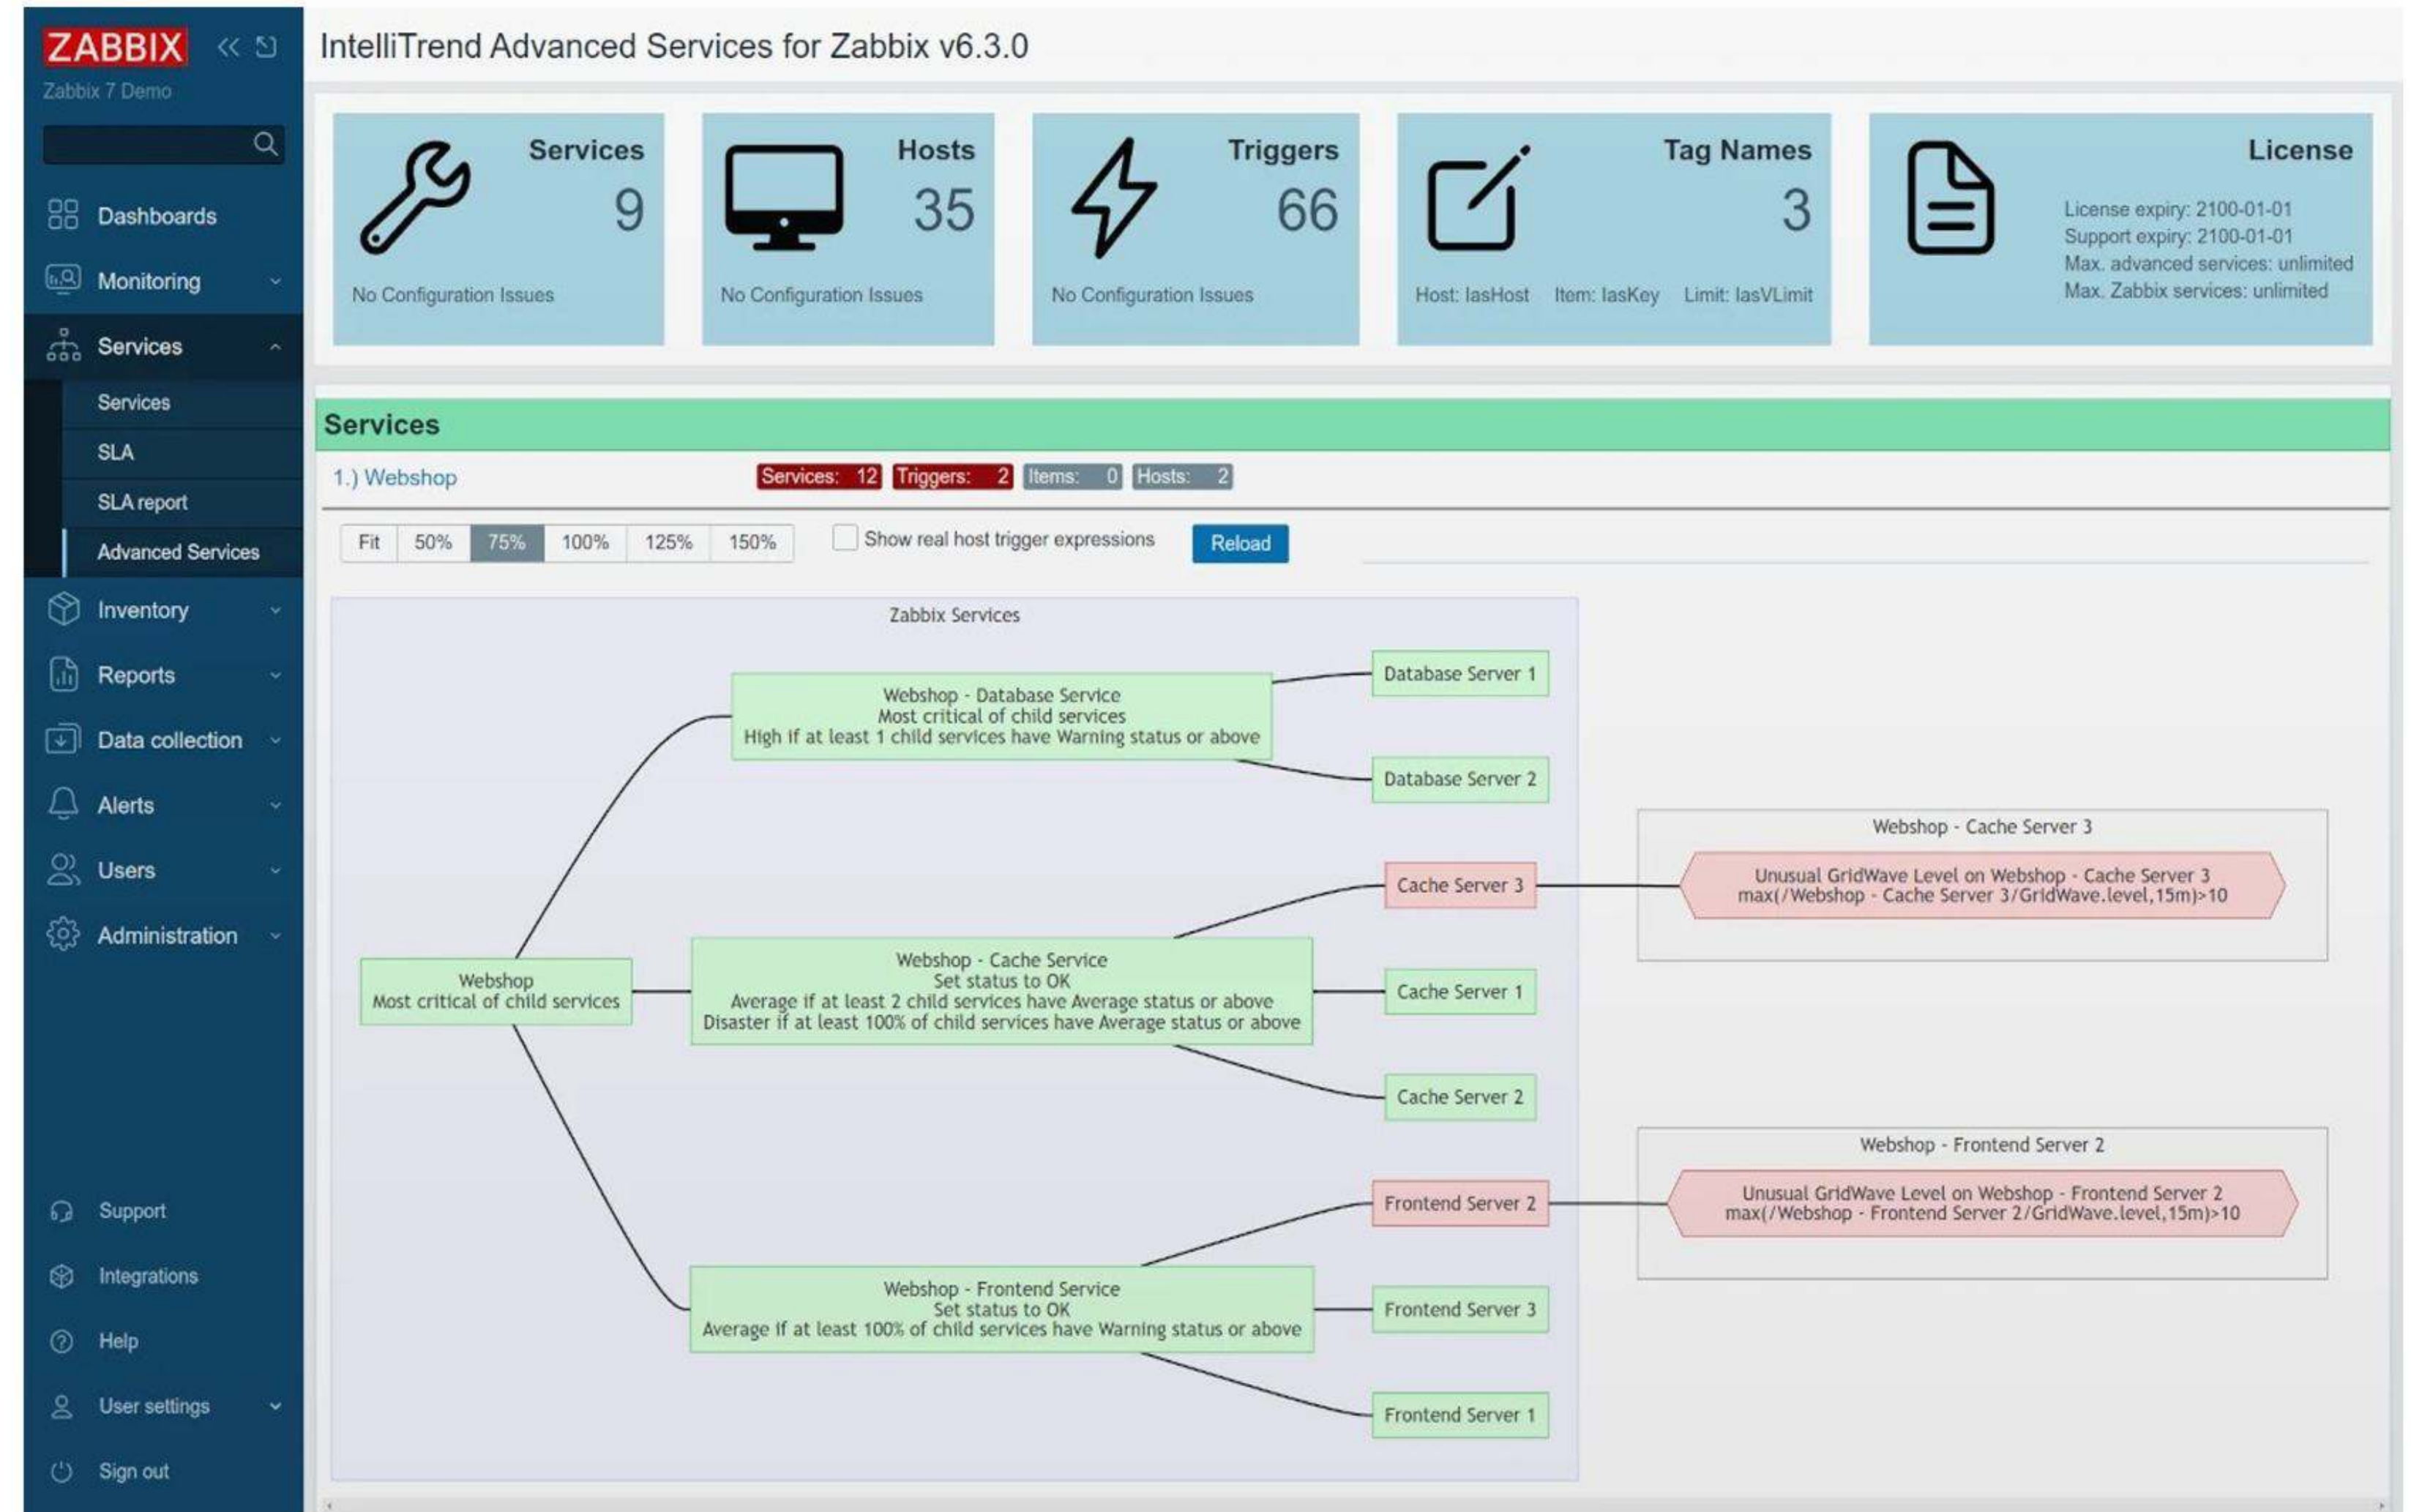

Visualize current service states and relationships in real time.

Integrated into Zabbix

Access it directly from the Services menu in Zabbix.

Zabbix Mobile

Stay updated wherever you are

Zabbix Mobile Benefits

- 100% as free as Zabbix
- Native Zabbix App developed in-house
- High-level security
- Zabbix Mobile running even through firewall
- Data encryption - Zabbix has no access to your data
- Manage Zabbix alerts and notifications from your pocket:
 - Get notifications
 - Acknowledge problems and change severity

Before you Install Zabbix Mobile

- Zabbix 8.0 compatible
- Zabbix Bridge + Adapter required
- Supported on Android and iOS mobile devices
- Up to 20 mobile devices per server
- Easy to install and start using
- Intuitive UI design

Zabbix Mobile App Concept

Main goal in development of Zabbix Mobile is allowing Zabbix users to get access to their Zabbix Instance on-the-go, even for instances behind private networks, while maintaining user data safety and ensuring no user data is visible for Zabbix SIA.

Add your device

Seamlessly connect devices to your Zabbix server, without any additional setups on mobile device.

Observe problems

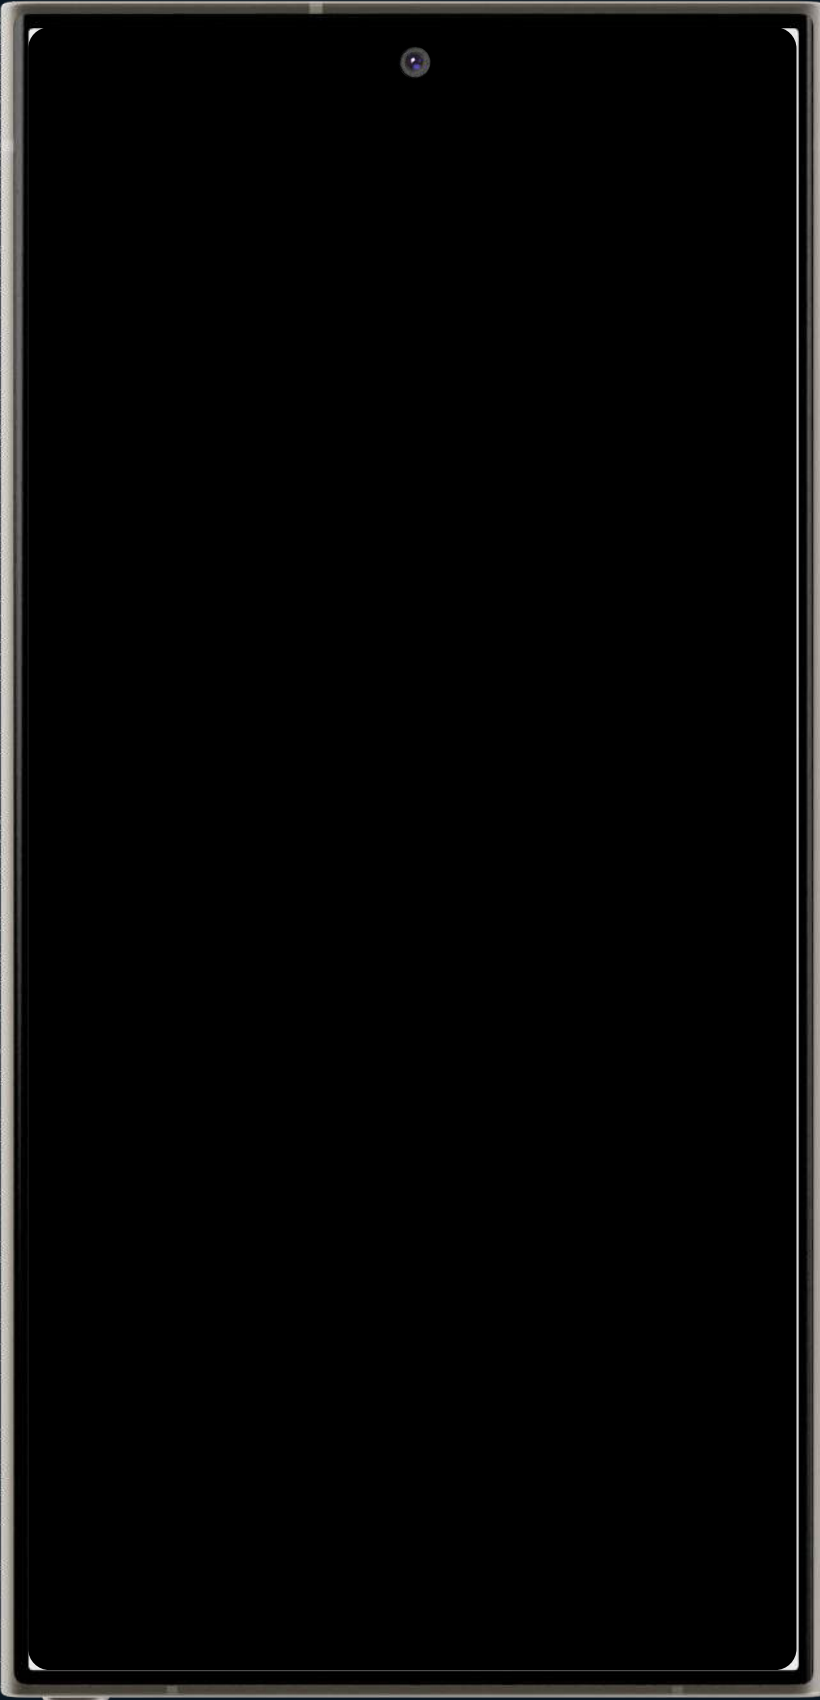

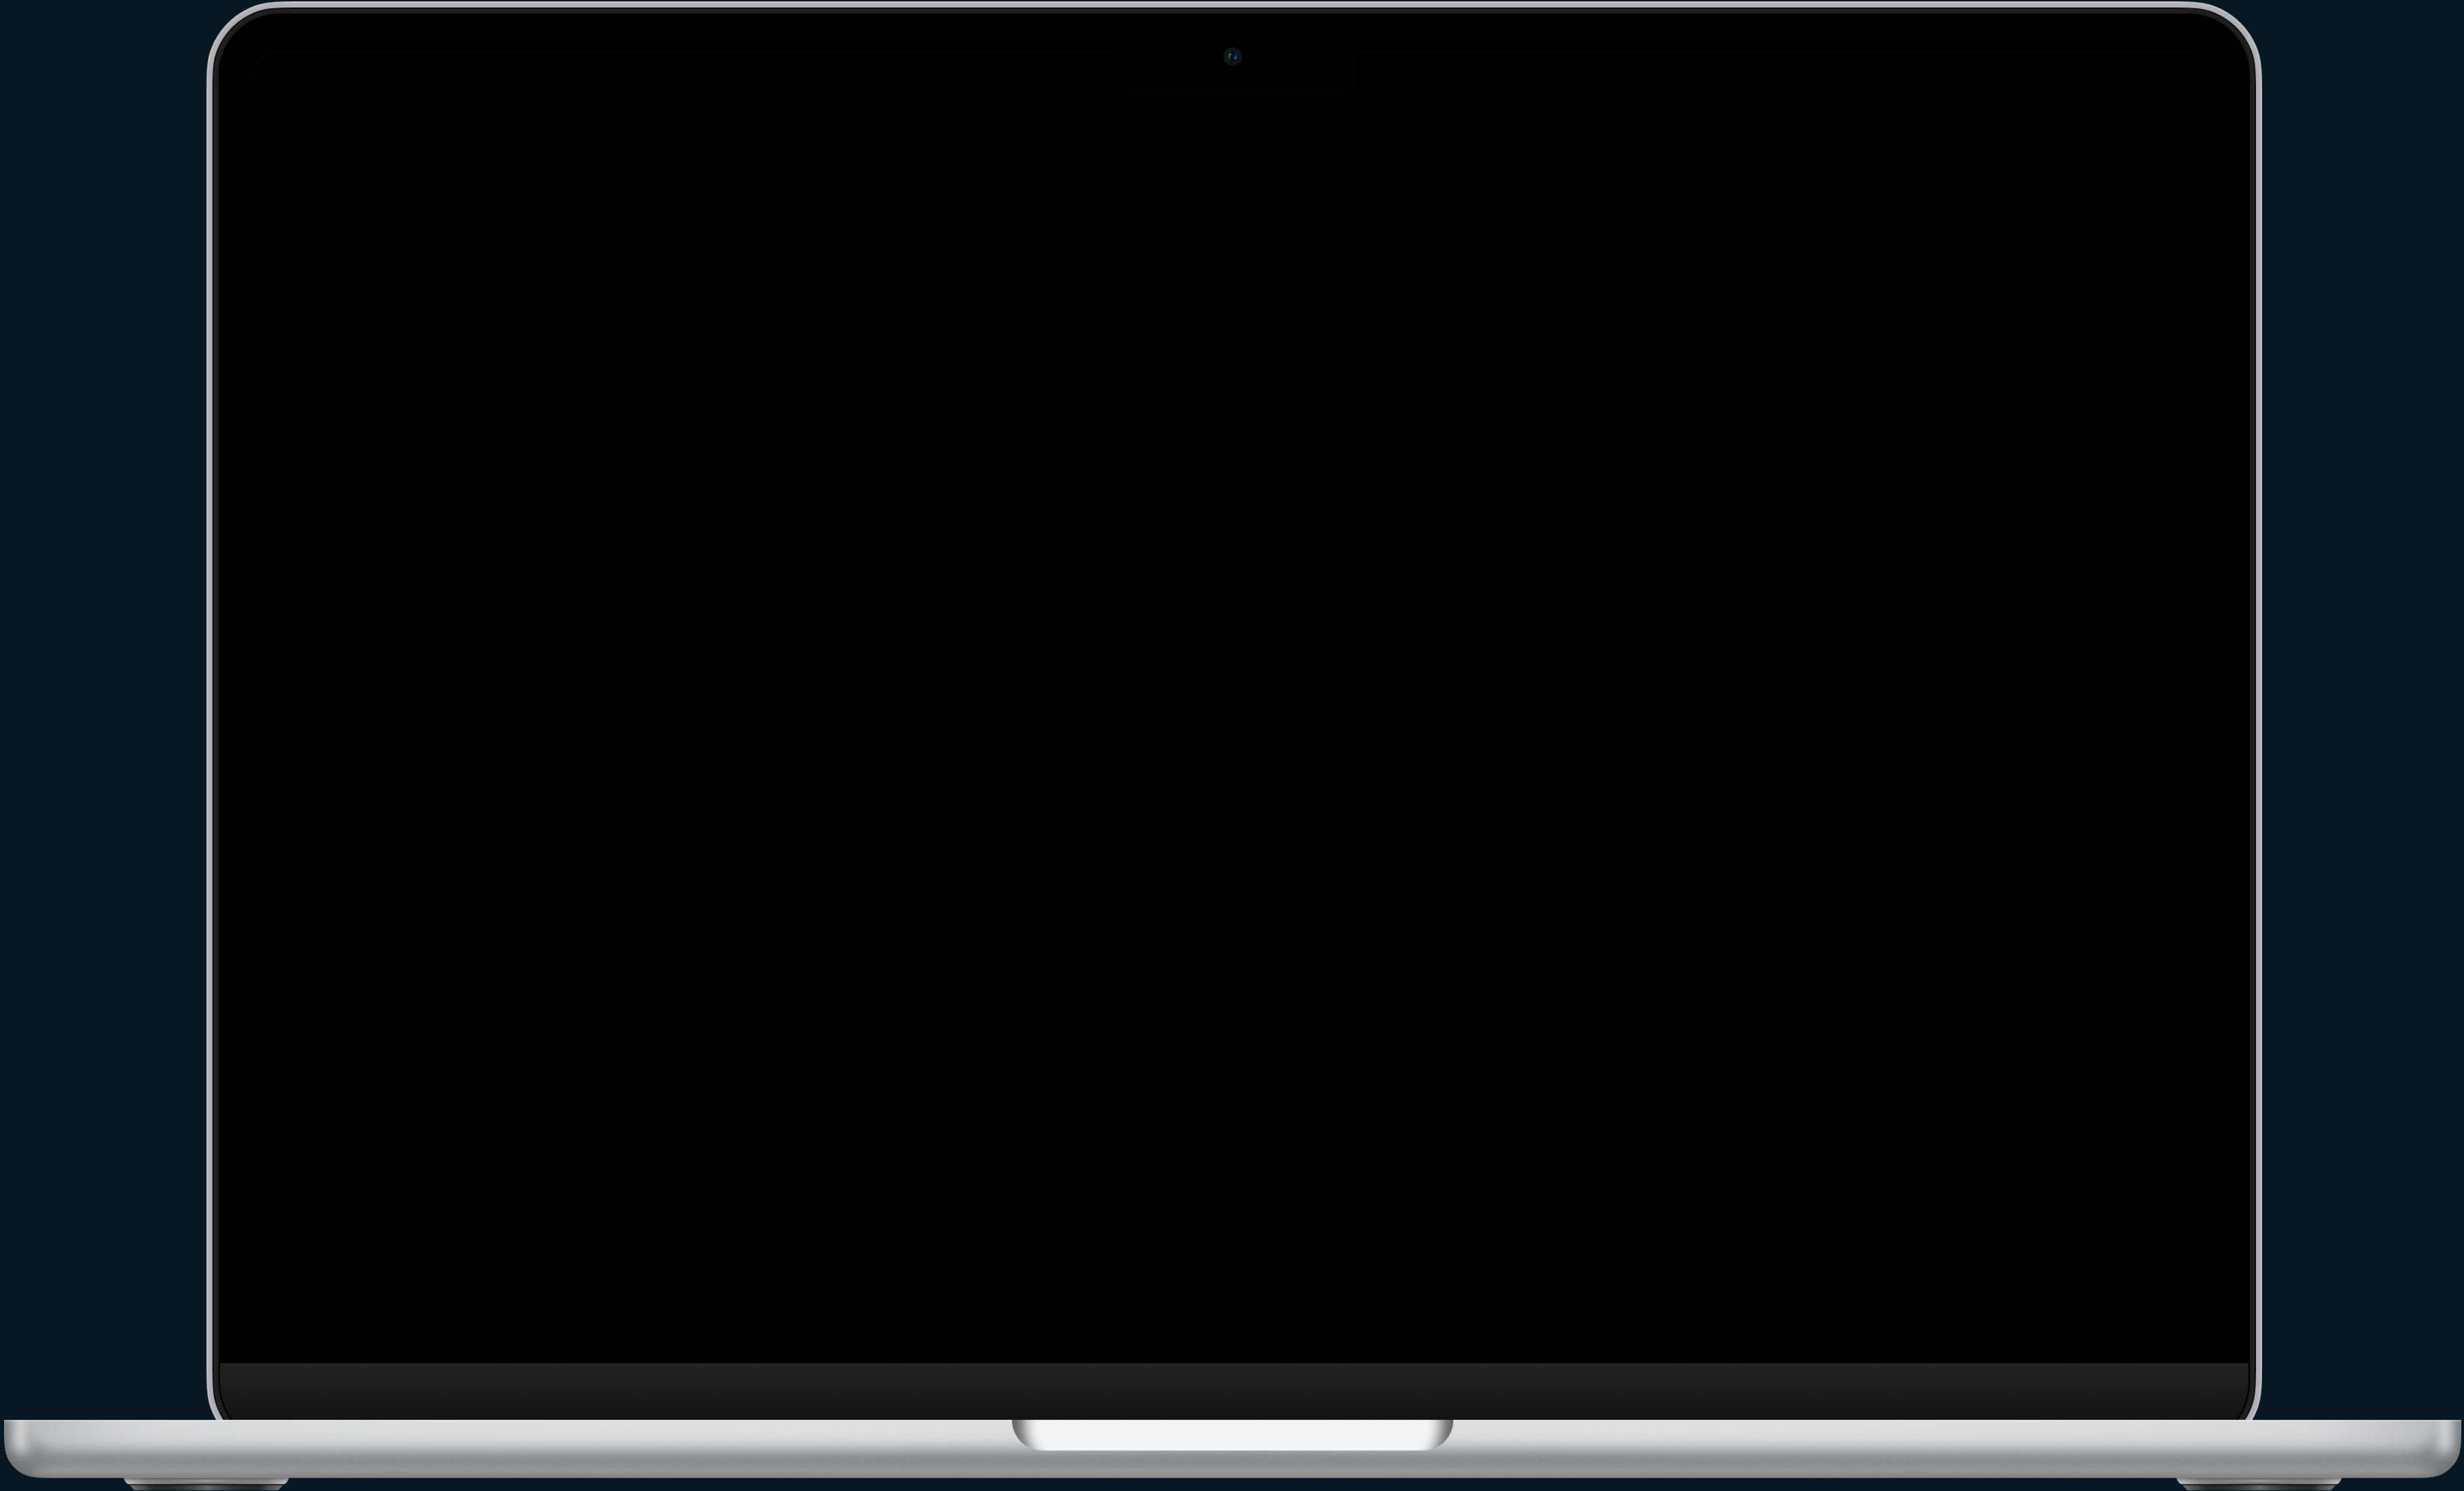

Monitor your problem on-the-go using configurable problem filters

Receive push notifications

Receive push notifications to react on your problems in time

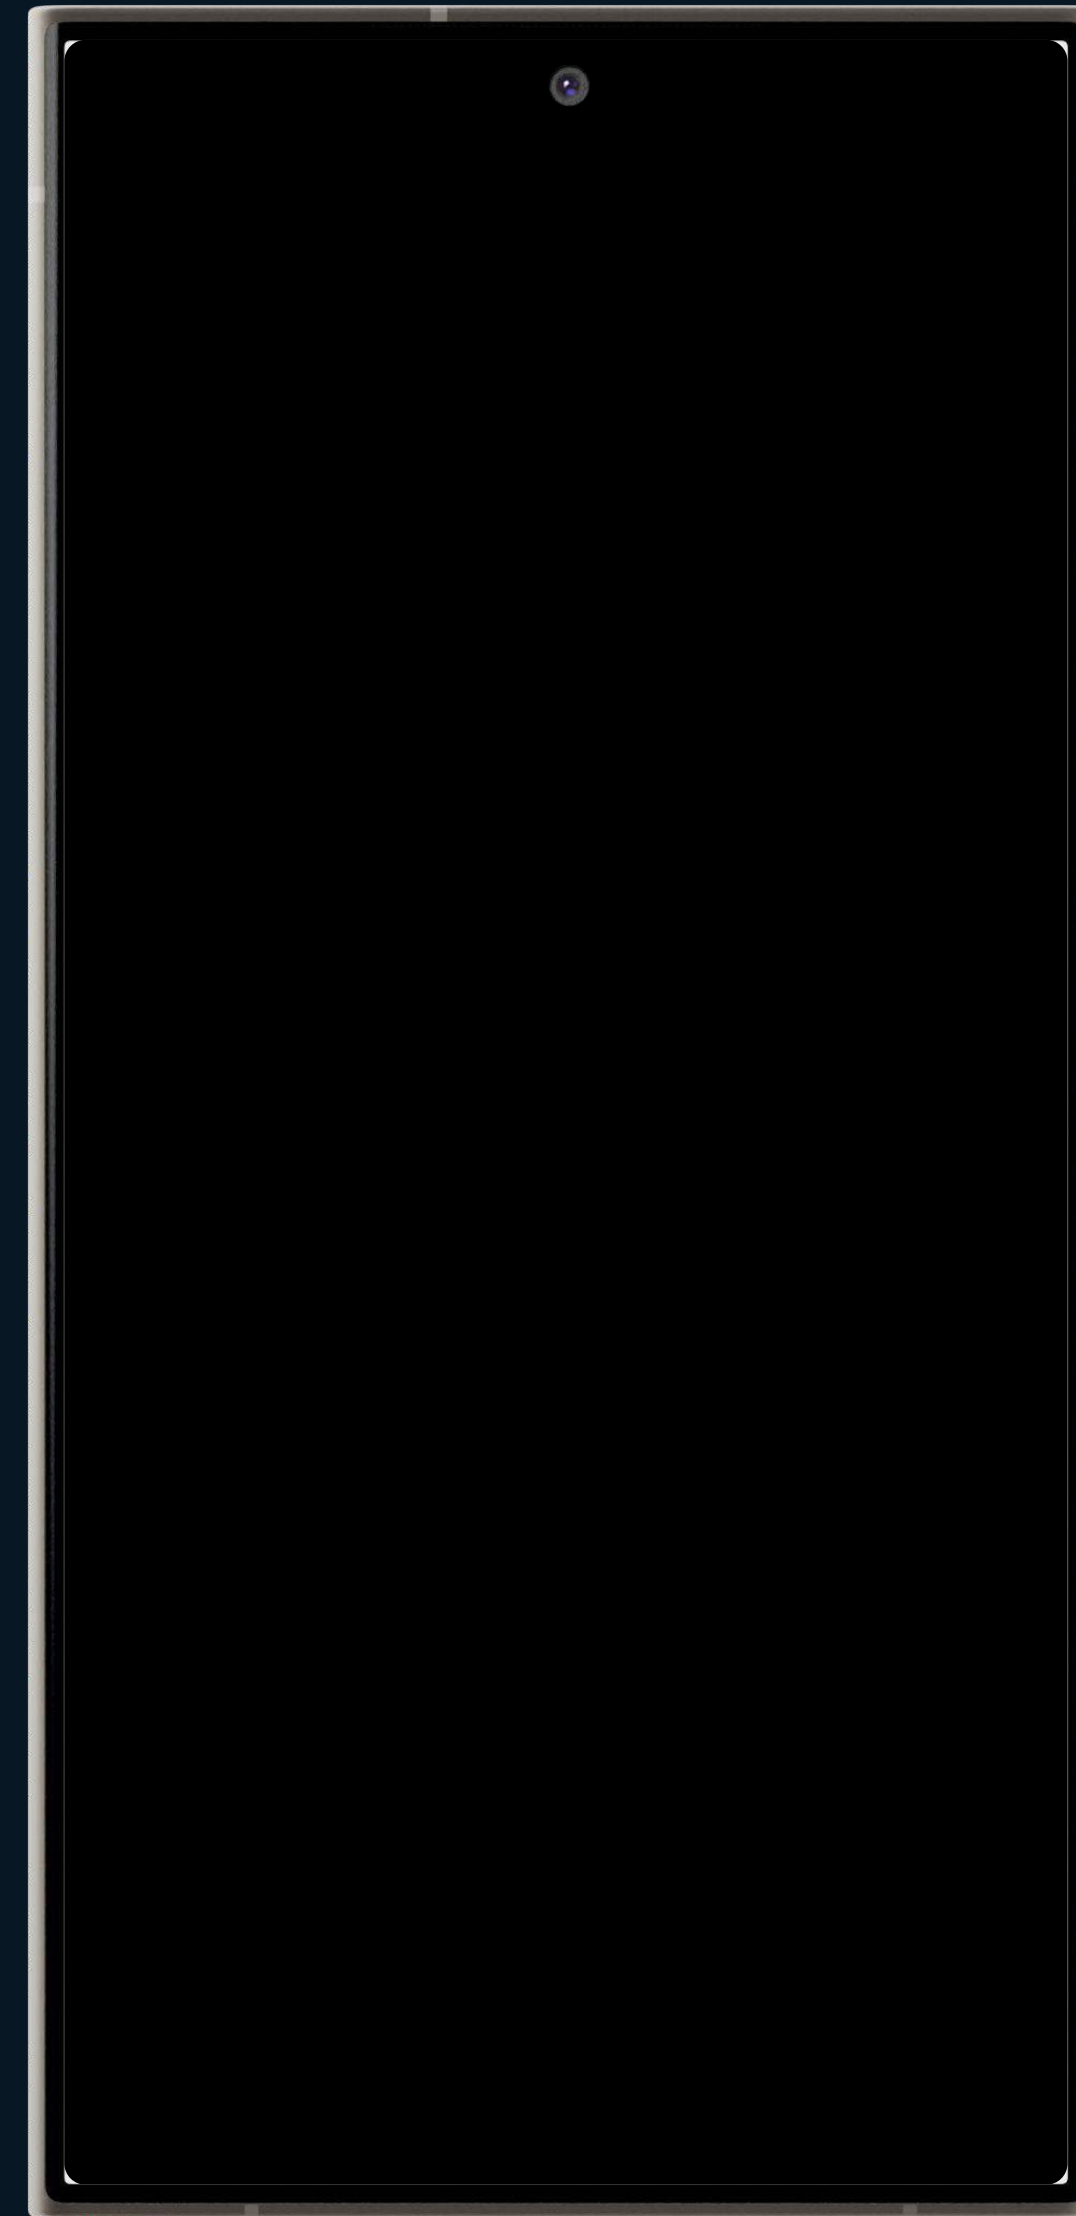

Don't forget to leave your feedback

Share with us what you:
