      name: Templates/Databases
  templates:
    - uuid: 00ade9277d7c41e8b57d638b22d54372
      template: 'Oracle by ODBC'
      name: 'Oracle by ODBC'
      description: |
        1. Create an Oracle user for monitoring.

        2. Set the user name and password in host macros ({$ORACLE.USER} and {$ORACLE.PASSWORD}).
        Do not forget to install the Microsoft ODBC driver on the Zabbix server or the Zabbix proxy.
        See Oracle documentation for instructions: https://www.oracle.com/database/technologies/releasenote-odbc-1c.html.

        Note! Credentials in the odbc.ini do not work for Oracle.
        Note! Be sure that ODBC connects to Oracle with session parameter NLS_NUMERIC_CHARACTERS= ','.' It is important for correct display
        float numbers in Zabbix.
        The "Service's TCP port state" item uses {HOST.CONN} and {$ORACLE.PORT} macros to check the availability of the listener.

      Generated by official Zabbix template tool "Templator"
