CONFERENCE

GERMANY

Agenda

Zabbix agent 2

- Setting up Zabbix agent 2
- Working with an existing Zabbix agent 2

Zabbix agent 2 loadable plugins

- What they are and how they function

Real-life problems and solutions

- Troubleshooting an existing plugin
- Working with your own plugin

A bit of an intro

Zabbix agent 2

- What is it?
- How can we set it up?
- Built-in Plugins!
- Loadable Plugins?

Technical but not too technical

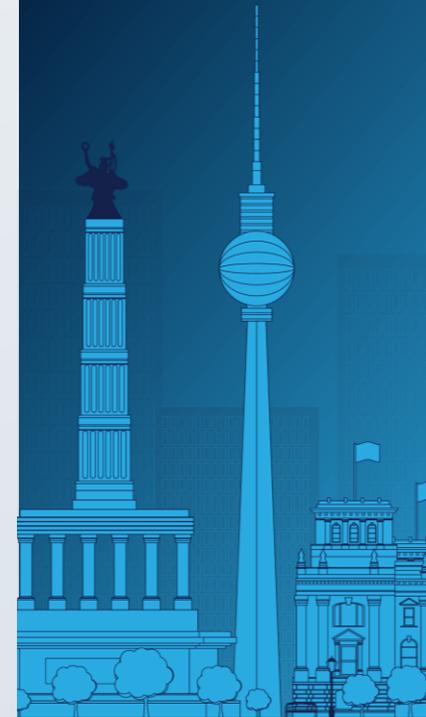

- Configuration
- Execution
- Unix-based
- Coding in examples

Zabbix agent 2

Installation and common issues

- The process explains the problem
- Setting up from packages
- Agent 2 version requirements
- Plugin setup
- Other common issues
 - ✓ Connection problems
 - ✓ Permission and firewalls
 - ✓ Resource limitations

Zabbix agent 2 plugins

Configuration

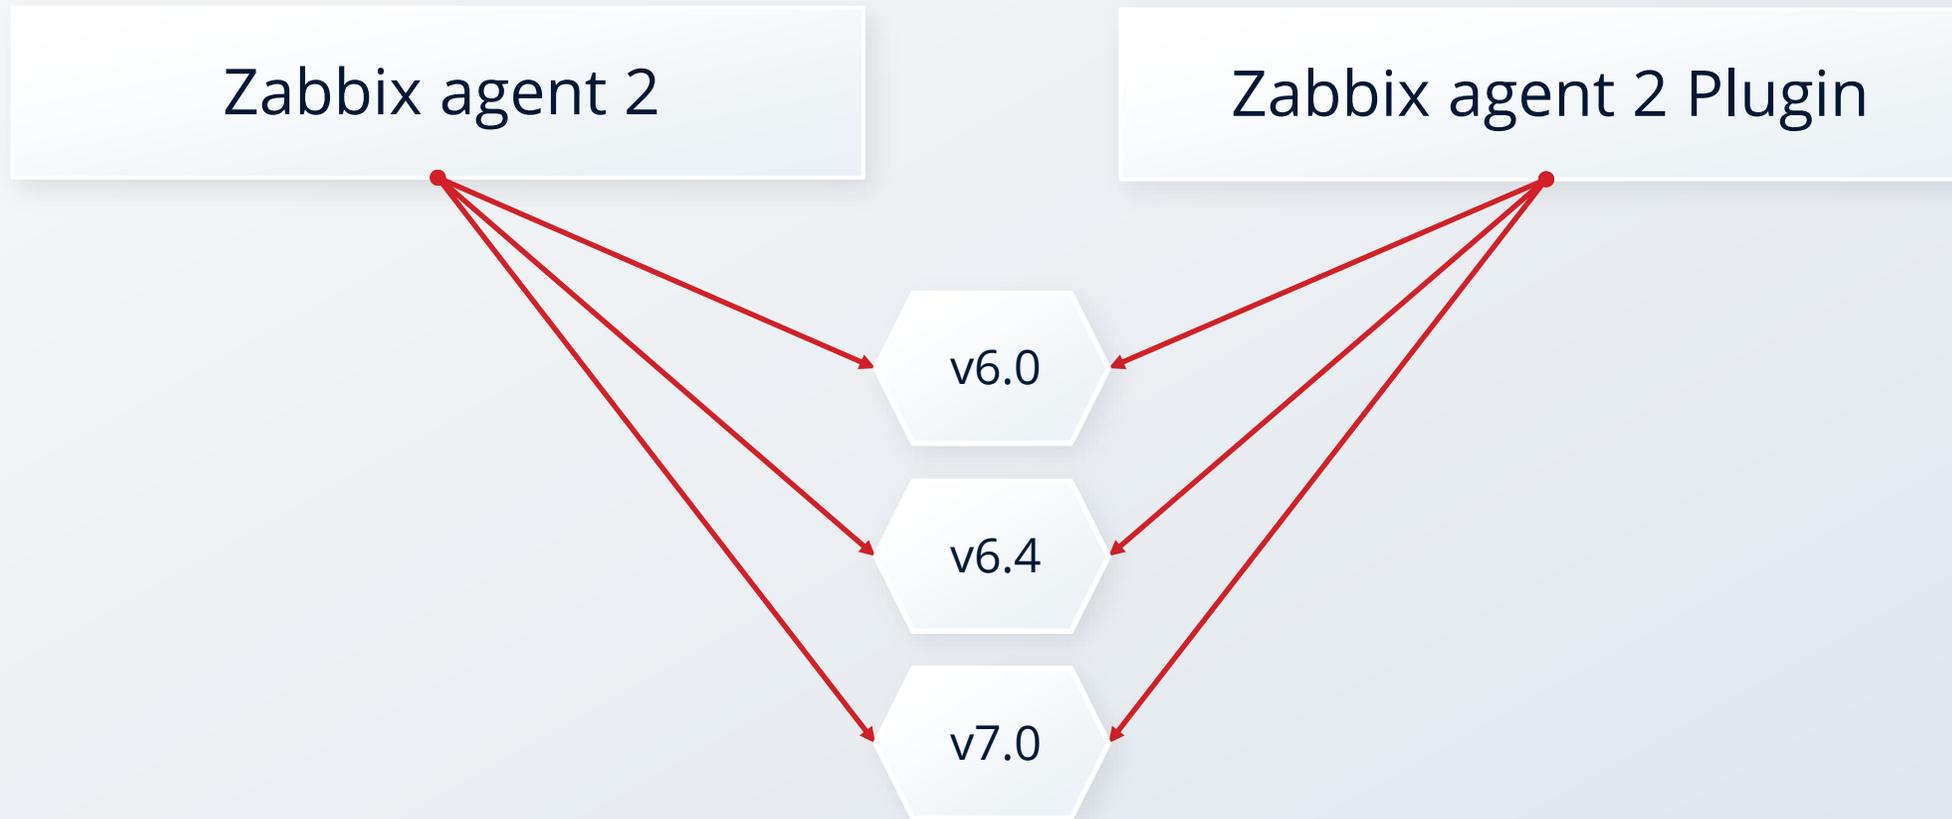

- Separate files
- Included

Key elements

- Loaded in only with 6.0 LTS
- Compiled or installed
- Officially native with GO

Plugin compatibility

Examples

Problem

- Zabbix agent 2 MongoDB plugin
- Zabbix agent 2 is built from packages
- Zabbix agent 2 is run from command line
- Added plugin binary path in custom configuration file
- Cannot access MongoDB metrics from Zabbix server

Examples

Solution

- Check Zabbix agent 2 startup log file
 - ✓ It contains all the information about available plugins
- MongoDB plugin is missing
- Check configuration file for plugin
 - ✓ MongoDB binary is set in path variable
- Check Zabbix agent 2 configuration file for plugin
 - ✓ MongoDB configuration file is added via included parameter
- Is Zabbix agent 2 executable launched with the correct configuration file?
 - ✓ Notice `-c` flag and instead uses default configuration

Examples

Zabbix agent 2 and plugin configuration

```
Plugins.MongoDB.System.Path=/path/to/mongodb.exe
```

```
Include=./zabbix_agent2.d/plugins.d/*.conf
```

```
Include=./path/to/plugin/mongodb.conf
```

Zabbix execution with custom configuration

```
./path/to/zabbix_agent2 -c  
/path/to/zabbix/custom/conf/zabbix_agent2.conf
```

Examples

Problem

- Zabbix agent 2 custom plugin
- Plugin compiles successfully
- Set up configuration
- Zabbix agent 2 is started
 - ✓ Plugin is in log list
- One metric key is not working

Examples

Solution

- Check Zabbix agent 2 startup log file
 - ✓ It contains the required plugin
- Increase log debug level to 5
- Restart Zabbix agent 2
 - ✓ Test the missing metric with `-t` or `zabbix_get`
 - ✓ Still missing
- Check source code if the required metric is registered

Examples

Zabbix agent 2 log

```
using plugin 'MongoDB' (/path/to/plugin/zabbix-agent2-plugin-mongodb) providing following interfaces: exporter, runner, configurator
```

Zabbix agent 2 log level

```
DebugLevel=5
```

Zabbix get

```
./path/to/zabbix_get -s 127.0.0.1 -p 10050 -k custom.plugin.key
```

Examples

Problem

- Upgrade Zabbix agent 2 to another major version
- A plugin stops working

Examples

Solution

- Check Zabbix agent 2 startup log file
 - ✓ It does not contain the required plugin
- Check Zabbix documentation and release notes
 - ✓ Previously integrated plugins are automatically included only in current LTS
- Find the required loadable plugin
 - ✓ Add it to Zabbix agent 2
- Check metric

Best practices

Regular updates

- Keep Zabbix agent 2 up to date on the current version
- Get informed about changes before major updates

Documentation and process review

- Keep up to date with coding and implementation best practices

Conclusion

Key points

- The process explains the problem
- The log file should be your first stop for troubleshooting
- Keep up to date with Zabbix news and changes
 - ✓ Especially when updating major versions
