

WHAT'S UP, ME?

Monitoring myself with Zabbix

WHY, OH WHY?

- Because I can
- Because I want to test the limits of Zabbix and my own creativity
- Extends the possibilities of my existing self-surveillance I already have thanks to iPhone and Apple Watch
- Over time I get lots of behavioural data about myself —> if I'm curious ten years from now about anything I'm now monitoring, I can check the facts from the data

MONITORING MY LOCATION

- All began with a discovery that with iOS Siri Shortcuts I can send info about my location to Zabbix
- Later realised that Home Assistant has native support for iCloud, which provides even smoother ride
- I now have historical data about where I have been to
- Or where's our car

The baby kept me moving during the spring

MONITORING MY ACTIVITY

- Home Assistant iCloud integration provides info about my iPhone and Apple Watch
- This way I also get info about my steps, distance, altitude...
- iPhone *activity* is also being gathered; it means it shows what iPhone thinks I might be doing
 - Driving, walking, cycling, sleeping...
 - I get to see percentages of what I do daily
- Unfortunately iOS/Mac *focus* mode is not returned to Home Assistant, it only says “On” or “Off” but not the name of the current mode
- Interesting bug(?): if I disconnect my iPhone from car Bluetooth whilst driving, often my iPhone thinks I’m cycling

MONITORING MY IPHONE & APPLE WATCH

- As a bonus, I get to see technical info about my iDevices
 - Battery Charging/Charged/Not charging
 - Battery % level
 - Connection type (Wi-Fi / mobile)
 - Wi-Fi connection name / mobile connection info details
 - GPS accuracy
 - Vertical accuracy
- Answers to questions like “Is the battery really draining faster than last year at this time?”

MONITORING MY/OUR BEHAVIOUR AT HOME

- Based on info about our IoT devices at home
- What time I arrive to my home office AND start working? (Status of home office light, time when I unlock my laptop)
- How much I play with PS5? (Is it connected to our network, is the TV using PS5 output)
- How much we spend time at home? (Status of Cozify Home scene, status of our phones)
- When does the baby go to sleep? (Status of night light in our bedroom)

SOME EXAMPLES

HOW MUCH I SPEND TIME IN MY HOME OFFICE?

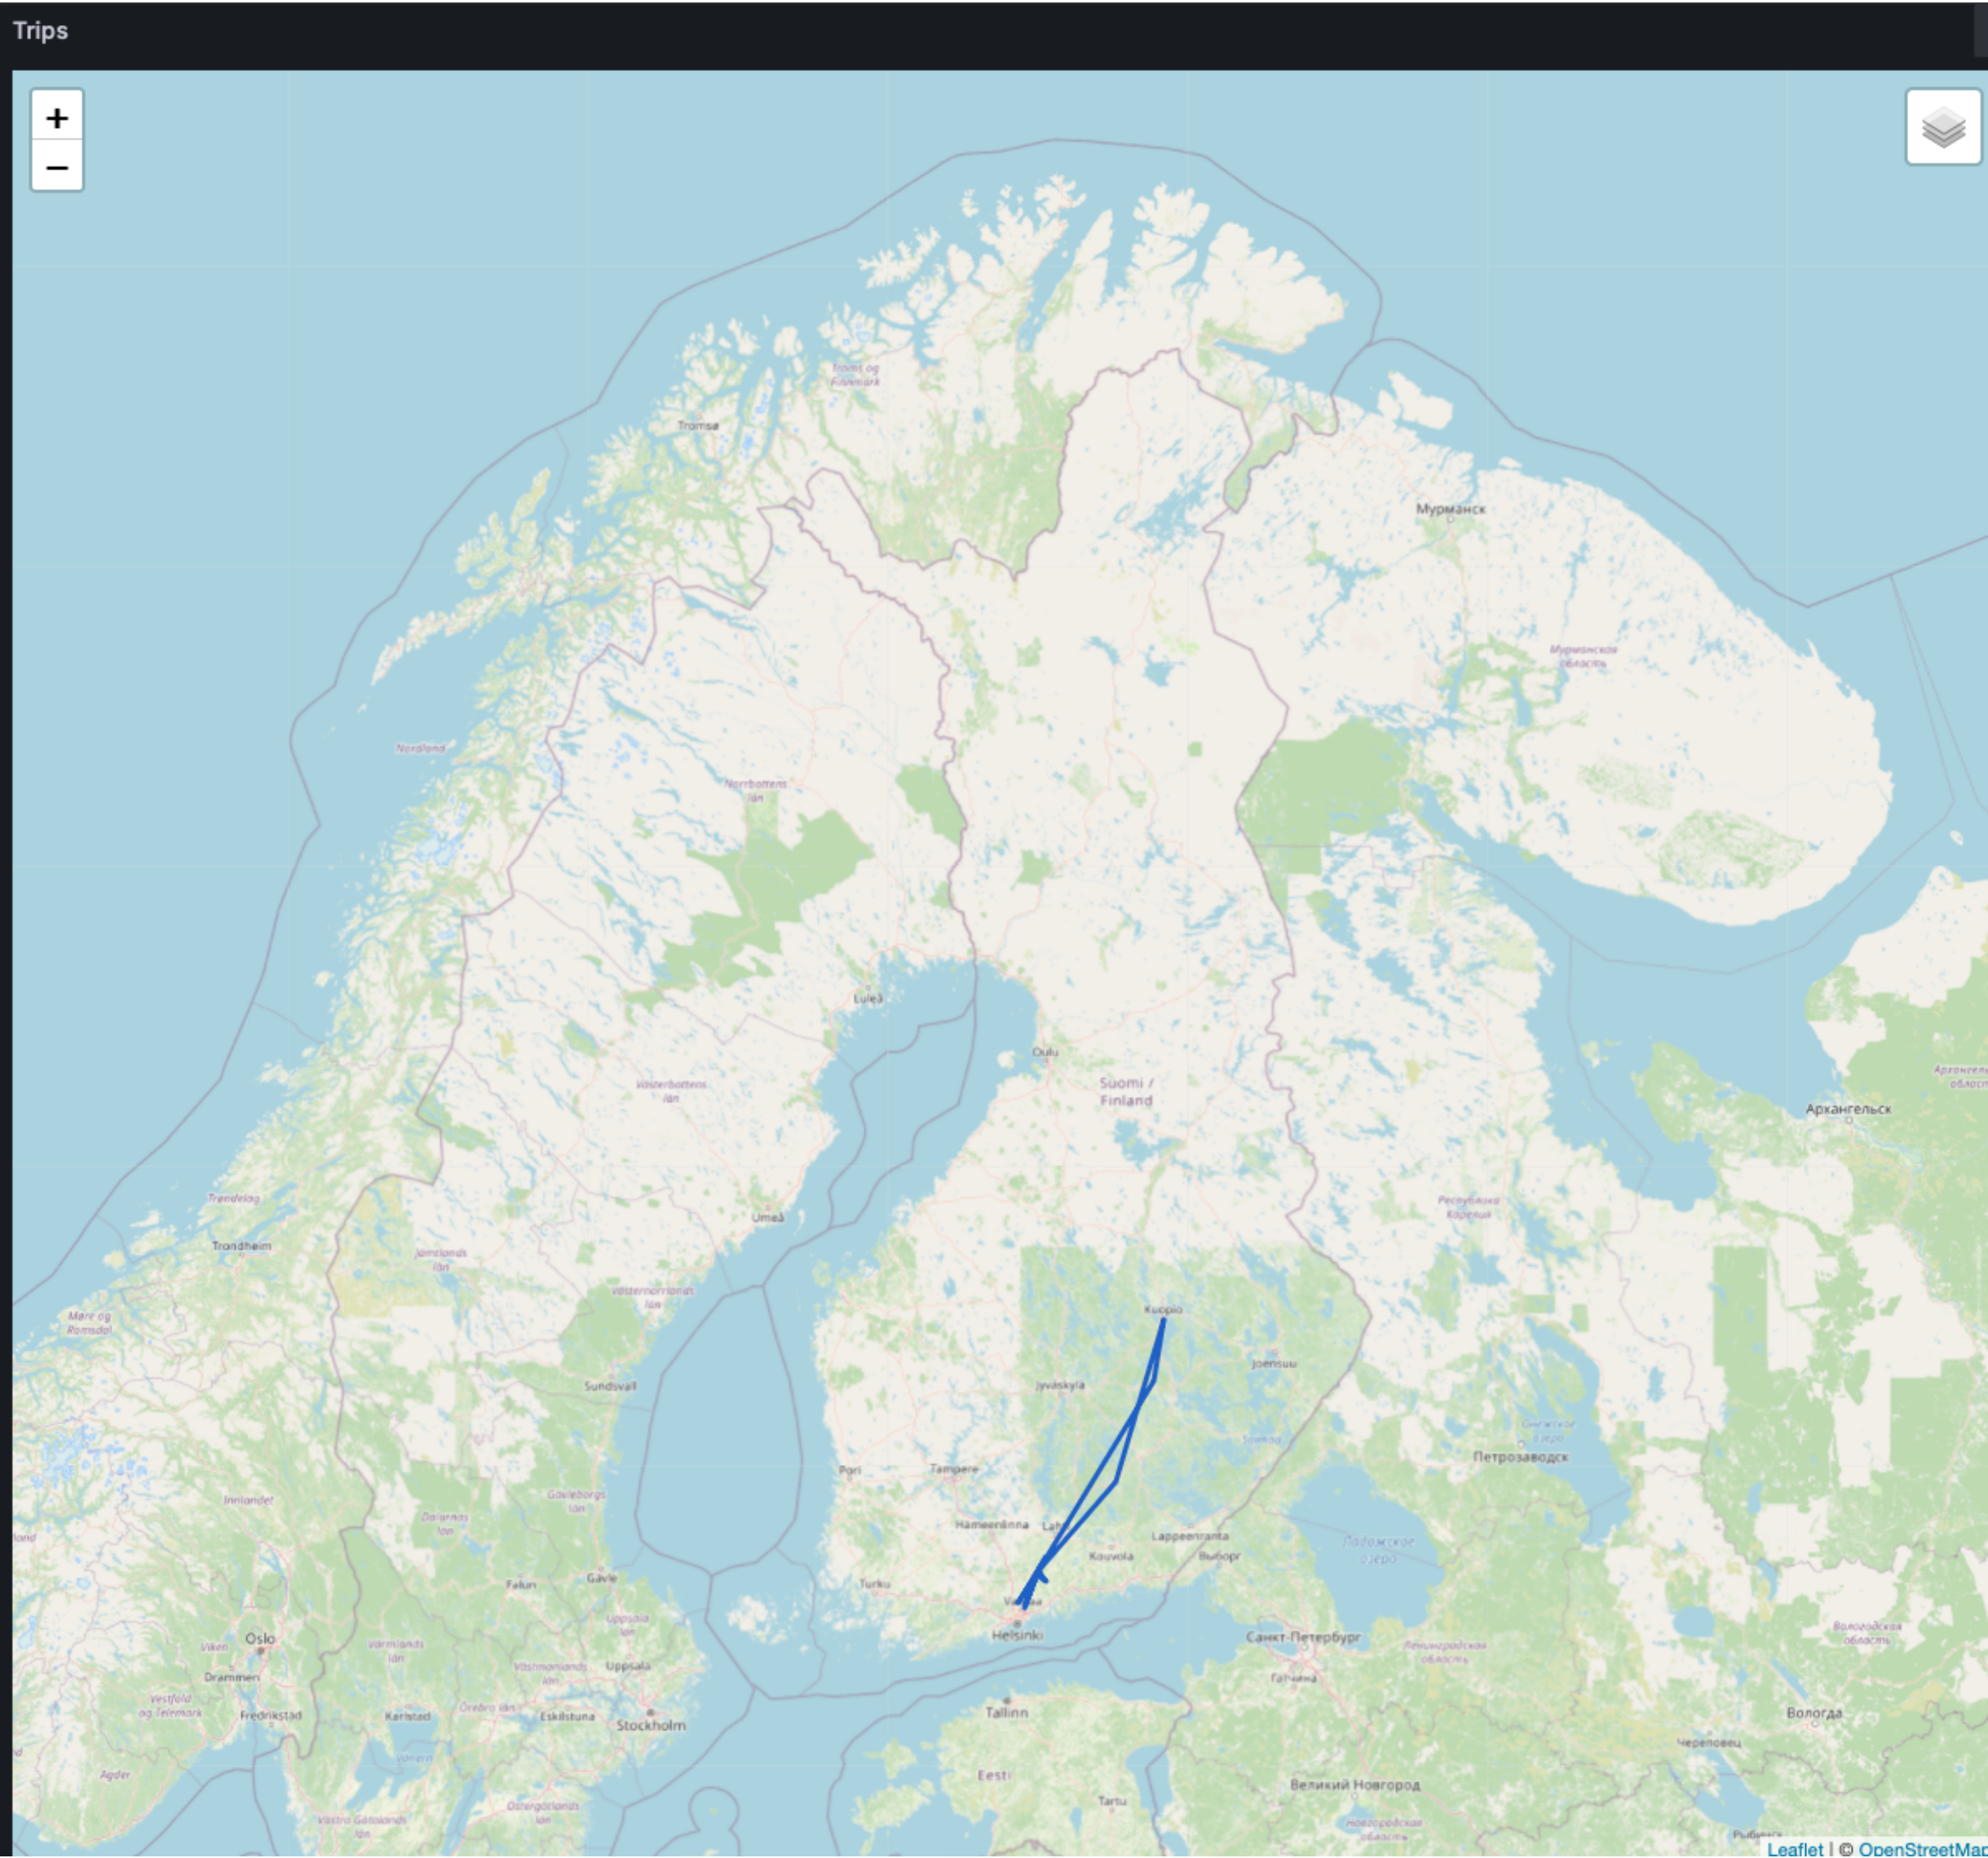

HOW MUCH WE SPEND TIME AT HOME?

BABY SLEEPING TIME
