

The ZABBIX logo consists of the word "ZABBIX" in a bold, white, sans-serif font, centered within a solid red rectangular box. The background of the entire slide is a dark blue gradient with a faint, glowing network of white lines and dots overlaid on a semi-transparent world map.

# ZABBIX

## Case study: Performance improvements with the new SNMP bulk monitoring

---

**Edgars Melveris**

Technical support engineer

# Deployment

---

## Turn-key project by Zabbix:

- Planned load ~10k NVPS
- SNMP checks almost exclusively.
- Zabbix version 5.0
- ~10 proxies (HA)

# Instance overview

---

## System information

| Parameter  | Value    | Details                        |
|--|----------|--------------------------------|
| Zabbix server is running                           | Yes      | zabbix.example.com:10051       |
| Number of hosts (enabled/disabled)                 | 14306    | 13867 / 439                    |
| Number of templates                                | 342      |                                |
| Number of items (enabled/disabled/not supported)   | 10779688 | 9953290 / 251426 / 574972      |
| Number of triggers (enabled/disabled [problem/ok]) | 980662   | 639466/ 341196 [5914 / 633552] |
| Number of users (online)                           | 322      | 30                             |
| Required server performance, new values per second | 12548    |                                |

# Deployment

## Hoping for [ZBXNEXT-6872](#)

**Z** ZABBIX FEATURE REQUESTS / ZBXNEXT-6872

### Increase max amount for StartPollers

Confirmed ▾

Details

Type: ↑ Change Request

Priority: ⚡ Major

Affects Version/s: 5.0.14

Component/s: Proxy (P),

Labels:

Description

On certain environments with many slow devices it might help if more than 1000 pollers could be started. For example we need to add an additional proxy only because existing proxy with 1000 pollers can only handle ~1000 NVPS. Above that pollers become 100% busy. Problem is caused by slow devices, but being able to just start more Pollers could help in such scenario.

People

Assignee: Andris Zeila ⓘ

Reporter: Edgars Melderis ⓘ

Votes: 2 Vote for this issue

Watchers: 4 Start watching this issue

# Deployment

Some hosts deployed:

- ⚡ Pollers quickly hit 100% busy
- ⚡ StartPollers=100 -> 200

More hosts added:

- ⚡ StartPollers=200 -> 500

Even more hosts added:

- ⚡ Pollers 100% busy again
- ⚡ StartPollers=500->1000

# Deployment

---

But what is the problem?

Many hosts timed-out, so timeout was increased

```
### Option: Timeout
#     Specifies how long we wait for agent, SNMP device or external check
# Range: 1-30
# Default: 4
Timeout=20
```

1 Poller collects less than 1 value per second

```
zabbix_server: poller #1 [got 5 values in 20.00465 sec, getting values]
zabbix_server: poller #2 [got 16 values in 20.00328 sec, getting values]
```

# Deployment

Pollers are still a too busy (the red line  )

Solution? Add more proxies!

# Deployment

More proxies deployed:

- ⚡ 10 proxies in total
- ⚡ 20 proxies in total...
- ⚡ Still not enough

Customer doesn't want to devote more hardware resources ☹️  
Containers? Run multiple binaries with custom conf files?

# Deployment

---

Break up the HA on proxies!

- ⚡ 40 proxies now
- ⚡ Situation somewhat stable
- ⚡ 12k NVPS

Some devices are slower than others

Constant need to balance them equally between proxies

# Solution?

Zabbix 6.4 was released - ZBXNEXT-4428

ZABBIX FEATURE REQUESTS / ZBXNEXT-4428

## internal logic of SNMP bulk processing

Closed ▾

▾ Details

Type:

Resolution:

Fixed

Priority:

⚡ Major

Fix Version/s:

6.4.0beta5, ... (1)

Affects Version/s:

3.4.7

Component/s:

Proxy (P), ... (1)

# Big hopes

---

## Upgrade Zabbix:

- ⚡ Upgrade backend DB (internal requirement)
- ⚡ Upgrade Zabbix server to 6.4

Nothing changed 😞

# Why nothing changed?

## SNMP discovery in previous Zabbix versions:

- ⚡ LLD rule performs **snmpwalk (v1)** or **snmpgetbulk (v2c, v3)** over specified **OID** in the tree
- ⚡ Separate items are created from item prototypes for each discovered **OID index**

The screenshot shows the configuration for a Zabbix LLD rule. The tabs at the top are: Discovery rule (selected), Preprocessing, LLD macros, Filters 12, and Overrides. The configuration fields are as follows:

- \* Name: Network interfaces discovery
- Type: SNMP agent
- \* Key: net.if.discovery
- \* Host interface: device.example.com:161
- \* SNMP OID: discovery[#{#IFNAME}],1.3.6.1.2.1.31.1.1.1.1,#{#IFADMINSTATUS},1.3.6.1.2.1.2.2.1.7
- \* Update interval: 1h

# Why nothing changed?

## SNMP discovery in previous Zabbix versions:

- ⚡ Each item created from classic SNMP LLD becomes part of a combined request
- ⚡ Average sized devices can benefit from that that approach.
- ⚡ Others either respond with an error or do not respond at all once the potential response is over a certain limit, making pollers busy.

# New walk[oid1,oid2,..] item benefits

- ⚡ The master item collects all SNMP data at once
- ⚡ Fewer connections to the monitored hosts are made
- ⚡ Metrics are collected in bulk and are used in several related items at once
- ⚡ Less load on Zabbix and device at the same time, since dependent items are extracting data from the master using SNMP walk value preprocessing step
