SUMMIT  
2024

# Browser monitoring and use cases

**Aleksandrs Petrovs-Gavrilovs**

Training technical administrator

# Browser monitoring

# BROWSER MONITORING

## **Browser monitoring** or **Browser Synthetic Monitoring**

A way to constantly checks **website** or **application** performance by simulating **user actions**, ensuring the production site runs smoothly regardless of user activity.

- ▶ Early issue detection during development or in a live environment
- ▶ Simulates user interactions with scripted tests
- ▶ Ensures a proactive check on application health
- ▶ Long-term and relevant health statistics
- ▶ Constant quality control

# Types of browser monitoring

## ▶ **Single-URL Monitors**

- Simulate a user visiting a specific URL and provide information such as availability and performance metrics.

## ▶ **Browser Clickpaths**

- Simulated user navigation through a site, automatically testing availability and performance at scheduled intervals. This approach can be used to detect and report UI bugs or unexpected functionality.

## ▶ **Mobile Simulation**

- Simulates mobile interactions to assess the availability and performance of mobile versions of websites.

## ▶ **HTTP(S) monitors**

- Simple HTTP requests. You can use them to monitor the availability of your API endpoints or perform simple HTTP checks for single-resource availability

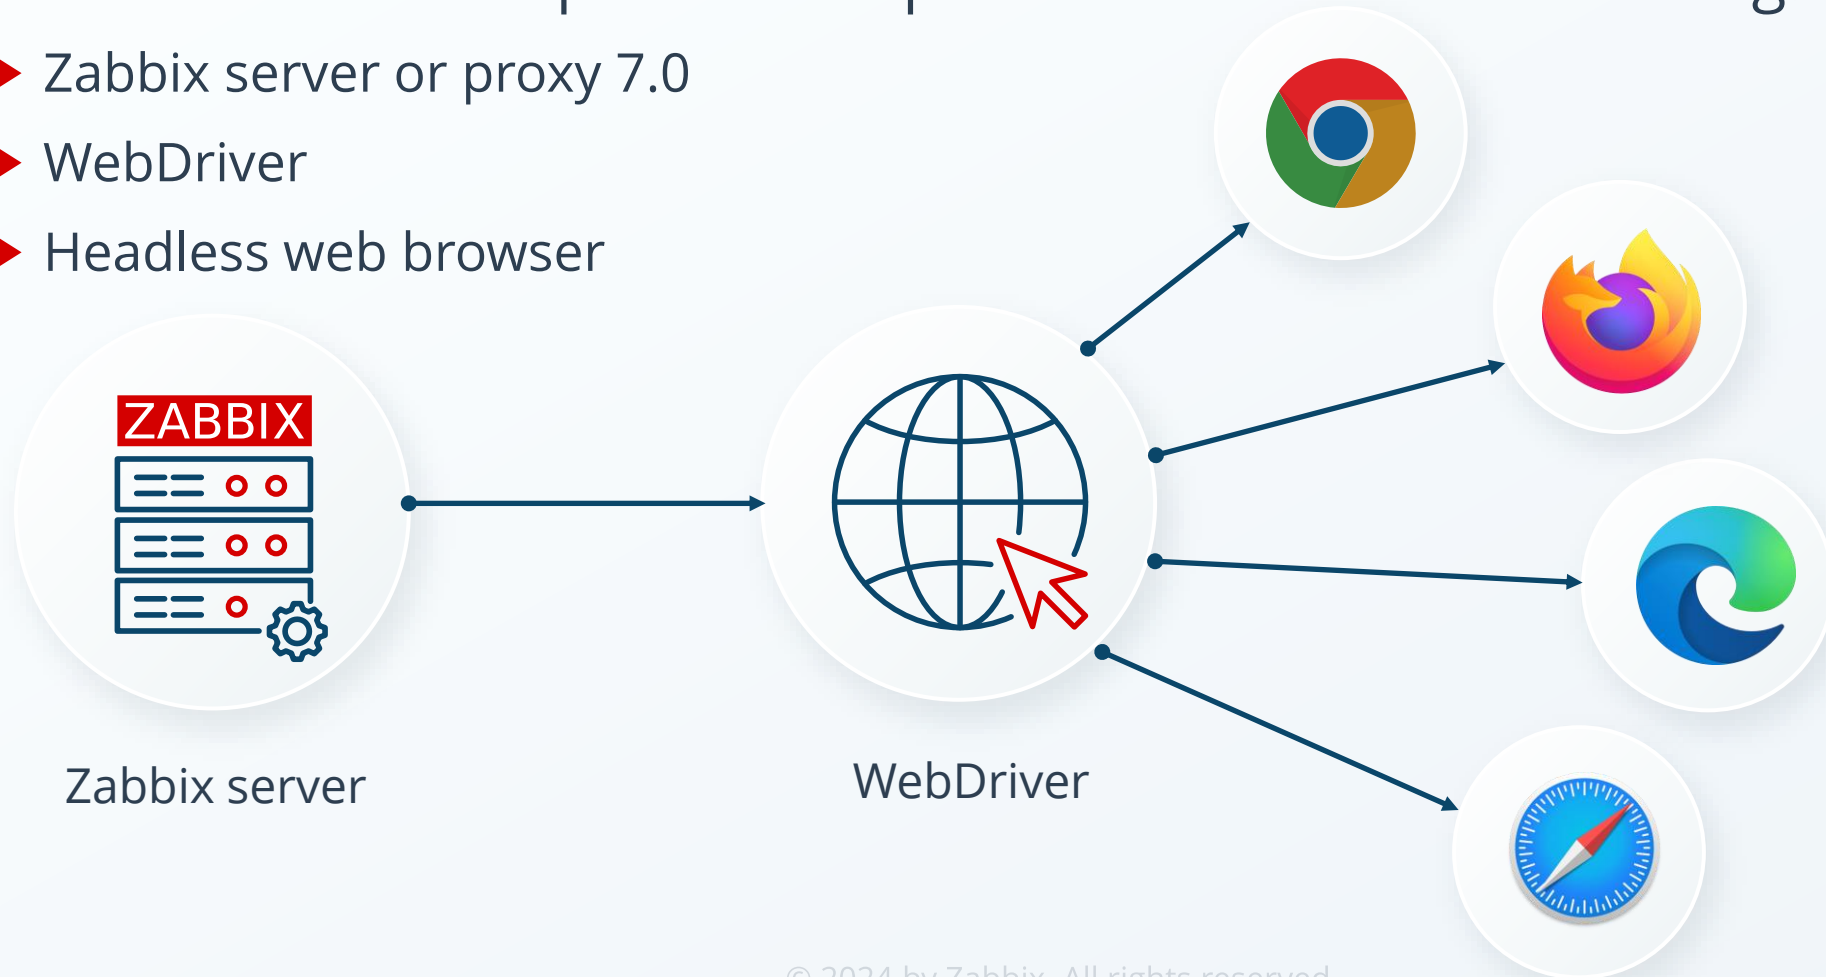

# Website monitoring setup

# MONITORING REQUIREMENTS

There are several components required for browser monitoring:

- ▶ Zabbix server or proxy 7.0
- ▶ WebDriver
- ▶ Headless web browser

# ZABBIX SERVER CONFIGURATION

The Zabbix server configuration file has two new parameters:

- ▶ WebDriverURL
- ▶ StartBrowserPollers

```
##### Browser monitoring #####

### Option: WebDriverURL
#     WebDriver interface HTTP[S] URL. For example http://localhost:4444 used with
#     Selenium WebDriver standalone server.
#
# Mandatory: no
# Default:
# WebDriverURL=
WebDriverURL=http://192.168.0.1:4444

### Option: StartBrowserPollers
#     Number of pre-forked instances of browser item pollers.
#
# Mandatory: no
# Range: 0-1000
# Default:
# StartBrowserPollers=1
StartBrowserPollers=3
```

# BROWSER ITEM

In Zabbix 7.0, a new item type is introduced: Browser

- ▶ Based on JavaScript
- ▶ Supports the browser class
- ▶ Support various new methods to work with pages

**New item**

# Taking screenshots

# The browser item can take screenshots of the monitored pages:

Item

Item Tags 1 Preprocessing 1

\* Name Website {\$WEBSITE.DOMAIN} Screenshot

Type Dependent item

\* Key website.screenshot

Type of information Binary

\* Master item Website by Browser: Website {\$WEBSITE.DOMAIN} Get data

\* History Do not store  Store up to 31d

Description Website {\$WEBSITE.DOMAIN} screenshot.

Enabled

- ▶ To take a screenshot of the page – use the *getScreenshot()* method
- ▶ Screenshot is included in the JSON object in base64 format
- ▶ It is extracted into a **binary dependent item**
- ▶ Can be viewed on the dashboards or sent via media type

# Screenshot size: up to 8K.

- ▶ Default screenshot size 1920x1080px.
- ▶ Screenshot can be displayed using the "Item history" widget.
- ▶ Screenshot size is specified by the *setScreenSize(x,y)* method.

The image displays a screenshot of the Zabbix website. On the left, there is a table titled "Item history" with two columns: "Timestamp" and "Screenshot". The table contains five rows of data, each with a timestamp and a corresponding screenshot of the Zabbix dashboard. The timestamps are: 2024-05-22 01:46:28 PM, 2024-05-22 01:44:28 PM, 2024-05-22 01:43:26 PM, 2024-05-22 01:42:28 PM, and 2024-05-22 01:41:28 PM. On the right, there is a promotional banner for the Zabbix event in Riga, featuring the text "The most important Zabbix event of 2024 is almost here!" and a "Register Now!" button. Below the banner, there are logos for various companies that trust Zabbix, including NEXON, ESA, ICANN, SEAT, and orange. At the bottom, there is a tagline "Monitor anything" and a description: "Get a single pane of glass view of your whole IT infrastructure stack".

# Objects and methods

# BROWSER OBJECTS AND METHODS

**Browser object** - manages WebDriver session through out the whole item execution.

- ▶ (initialize session => execute all actions in script => close session).

**Element** - an element that is found on the opened webpage.

**Cookie** - a cookie returned by the `getCookies()` method.

**Alert** - a webpage alert returned by the `getAlert()` method.

**Result** - represents the collected statistics data gathered by `getResult()` method. Contains the following:

- ▶ Session statistics (in example total session duration)
- ▶ Error information (if such occurred)
- ▶ Performance data (if such collected)
- ▶ Any collected data that is written directly to the result object

## Browser object methods:

|                                       |   |                                 |   |
|---------------------------------------|---|---------------------------------|---|
| Retrieving predefined browser options | chromeOptions()<br>firefoxOptions()<br>edgeOptions()<br>safariOptions()                   | Error related operations        | getError()<br>setError(message)<br>discardError()   |
| Timeout management                    | setScriptTimeout(timeout)<br>setSessionTimeout(timeout)<br>setElementWaitTimeout(timeout) | URL and page related operations | navigate(url)<br>getUrl()<br>getPageSource()<br>getAlert()<br>getCookies()<br>addCookie(cookie) |
| Collecting data                       | collectPerfEntries(mark)<br>getRawPerfEntries()<br>getResult()<br>getScreenshot()         | Locating elements on page       | findElement(strategy, selector)<br>findElements(strategy, selector)                             |

## Element object methods:

|                    |  |                |   |
|--------------------|--|----------------|---|
| getAttribute(name) | Return the value of the given attribute of the object, for example: class, id, style, display e.t.c. | click()        | Click on element.   |
| getProperty(name)  | Return the value of the given property of the object, for example: className, baseUrl.e.t.c.         | sendKeys(keys) | Send keys to element. Method is used for filling data into editable elements. |
| getText()          | Return element text.   | clear()        | Remove the content of editable element  |

Summit agenda

2024-09-11 15:52:41 AM

The screenshot shows the Zabbix Summit agenda for Day 1: Oct 4, 2024. The page is divided into two tracks: MAIN STAGE and BUSINESS TRACK. The MAIN STAGE track includes registration, a keynote by Alexei Vladishev, a presentation on AI-enhanced monitoring workflows, a lunch break, and a session on leveraging machine learning. The BUSINESS TRACK track includes a presentation on the evolution of IT monitoring, a meeting on OpenSource projects, a session on Zabbix for MSPs, a coffee break, and a session on root cause problem detection.

# Authenticate

# Quick and a bit more advanced

Create a template that represents your login page

Link it to hosts that represent the pages

Monitor if login is working, confirm with screenshots

# Potential variables - user macros

- ▶ You may need to monitor multiple pages
- ▶ Credential (hopefully) will be different
- ▶ Various strategies may need to be applied
  - CSS selector
  - Link text
  - Partial link text
  - Tag name
  - Xpath

| Macro                            | Value                           |
|----------------------------------|---------------------------------|
| { \$LINK }                       | https://support.zabbix.com/ T v |
| { \$LOGIN.FORM.BUTTON.PATH }     | input#login T v                 |

4 browser = new Browser(Browser.chromeOptions());
5 browser.setScreenSize(Number(1980), Number(1020));
6 screens = [];
7 const screenshot = browser.getScreenshot();
8 try {
9     // Parsing parameters
10    var params = JSON.parse(value); // Parse the JSON string containing parameters passed from Zabbix.
11
12    browser.navigate(params.url);
13    screens.push(browser.getScreenshot());
14
15    // enter username
16    var el = browser.findElement(params.strategy, params.loginfield);
17    if (el === null) {throw Error("cannot find name input field");}
18    el.sendKeys(params.username);
19    screens.push(browser.getScreenshot());
20
21    // Passing parameters
22    // enter password
23    el = browser.findElement(params.strategy, params.passwordfield);
24    if (el === null) { throw Error("cannot find password input field"); }
25    el.sendKeys(params.password);
26    screens.push(browser.getScreenshot());
27
28    // login
29    el = browser.findElement(params.strategy, params.button);
30    if (el === null) { throw Error("cannot find login button"); }
31    el.click();

```

# Make screenshots for each step

| <input type="checkbox"/> | Name ▲  | Triggers | Key          |
|--------------------------|---|----------|--------------|
| <input type="checkbox"/> | ... Authenticate to Jira                                    |          | authenticate |
| <input type="checkbox"/> | ... <u>Authenticate to Jira</u> : Authentication screenshot |          | step4        |
| <input type="checkbox"/> | ... <u>Authenticate to Jira</u> : Enter password screenshot |          | step3        |
| <input type="checkbox"/> | ... <u>Authenticate to Jira</u> : Enter username screenshot |          | step2        |
| <input type="checkbox"/> | ... <u>Authenticate to Jira</u> : Landing page screenshot   |          | step1        |

This screenshot shows the 'Projects' section of the Zabbix Jira integration. It lists three projects: 'ZABBIX BUGS AND ISSUES (ZBX)', 'ZABBIX CONTRIBUTION (ZBXCTR)', and 'ZABBIX FEATURE REQUESTS (ZBXNEXT)'. Each project entry includes a lead name and a dropdown menu for further actions.

This screenshot shows the 'Login' page of the Zabbix system. It features a form with fields for 'Username' (containing 'logavazz') and 'Password'. There are also checkboxes for 'Remember my login on this computer' and a link for 'Not a member? Sign up for an account.' Below the form are buttons for 'Log in', 'Login SSO', and 'Can't access your account?'.

This screenshot shows the 'System Dashboard' of the Zabbix system. It includes a navigation bar with 'ZABBIX' and various menu items like 'Dashboards', 'Projects', 'Issues', 'Tempo', and 'Issue Templates'. The main content area is divided into several sections: 'Introduction' (welcome message), 'Favorite Filters' (notification about no filters), 'Assigned to Me' (notification about no issues), 'Issues in progress' (notification about no issues), and 'Quick Links' (navigation and filters). A notification bubble is visible in the top right corner.
