

ZABBIX

SUMMIT
2024

Browser monitoring workshop

Aleksandrs Petrovs-Gavrilovs

Training technical administrator

There are three key elements (information boxes) in the workshop slides:

- ▶ Linux virtual machine CLI (command-line interface)
 - You need to enter the commands specified here in your Linux SSH terminal or using the web interface <http://student-XX-zbxtr-YYYY.zabbix.training:9090>, without the # symbol:

```
# systemctl enable zabbix-server --now
```

- ▶ Text on the screen after a command execution (output may differ slightly)

```
Created symlink /etc/systemd/system/multi-user.target.wants/zabbix-server.service
```

- ▶ Linux editor screen – here, change the specified parameters to get required functionality

```
### Option: DBPassword
# Database password.
# Comment this line if no password is used.
DBPassword=P455w0RD
```

Browser monitoring

Browser monitoring or Browser Synthetic Monitoring

A way to constantly checks **website** or **application** performance by simulating **user actions**, ensuring the production site runs smoothly regardless of user activity.

- ▶ Early issue detection during development or in a live environment
- ▶ Simulates user interactions with scripted tests
- ▶ Ensures a proactive check on application health
- ▶ Long-term and relevant health statistics
- ▶ Constant quality control

Types of browser monitoring

▶ **Single-URL Monitors**

- Simulate a user visiting a specific URL and provide information such as availability and performance metrics.

▶ **Browser Clickpaths**

- Simulated user navigation through a site, automatically testing availability and performance at scheduled intervals. This approach can be used to detect and report UI bugs or unexpected functionality.

▶ **Mobile Simulation**

- Simulates mobile interactions to assess the availability and performance of mobile versions of websites.

▶ **HTTP(S) monitors**

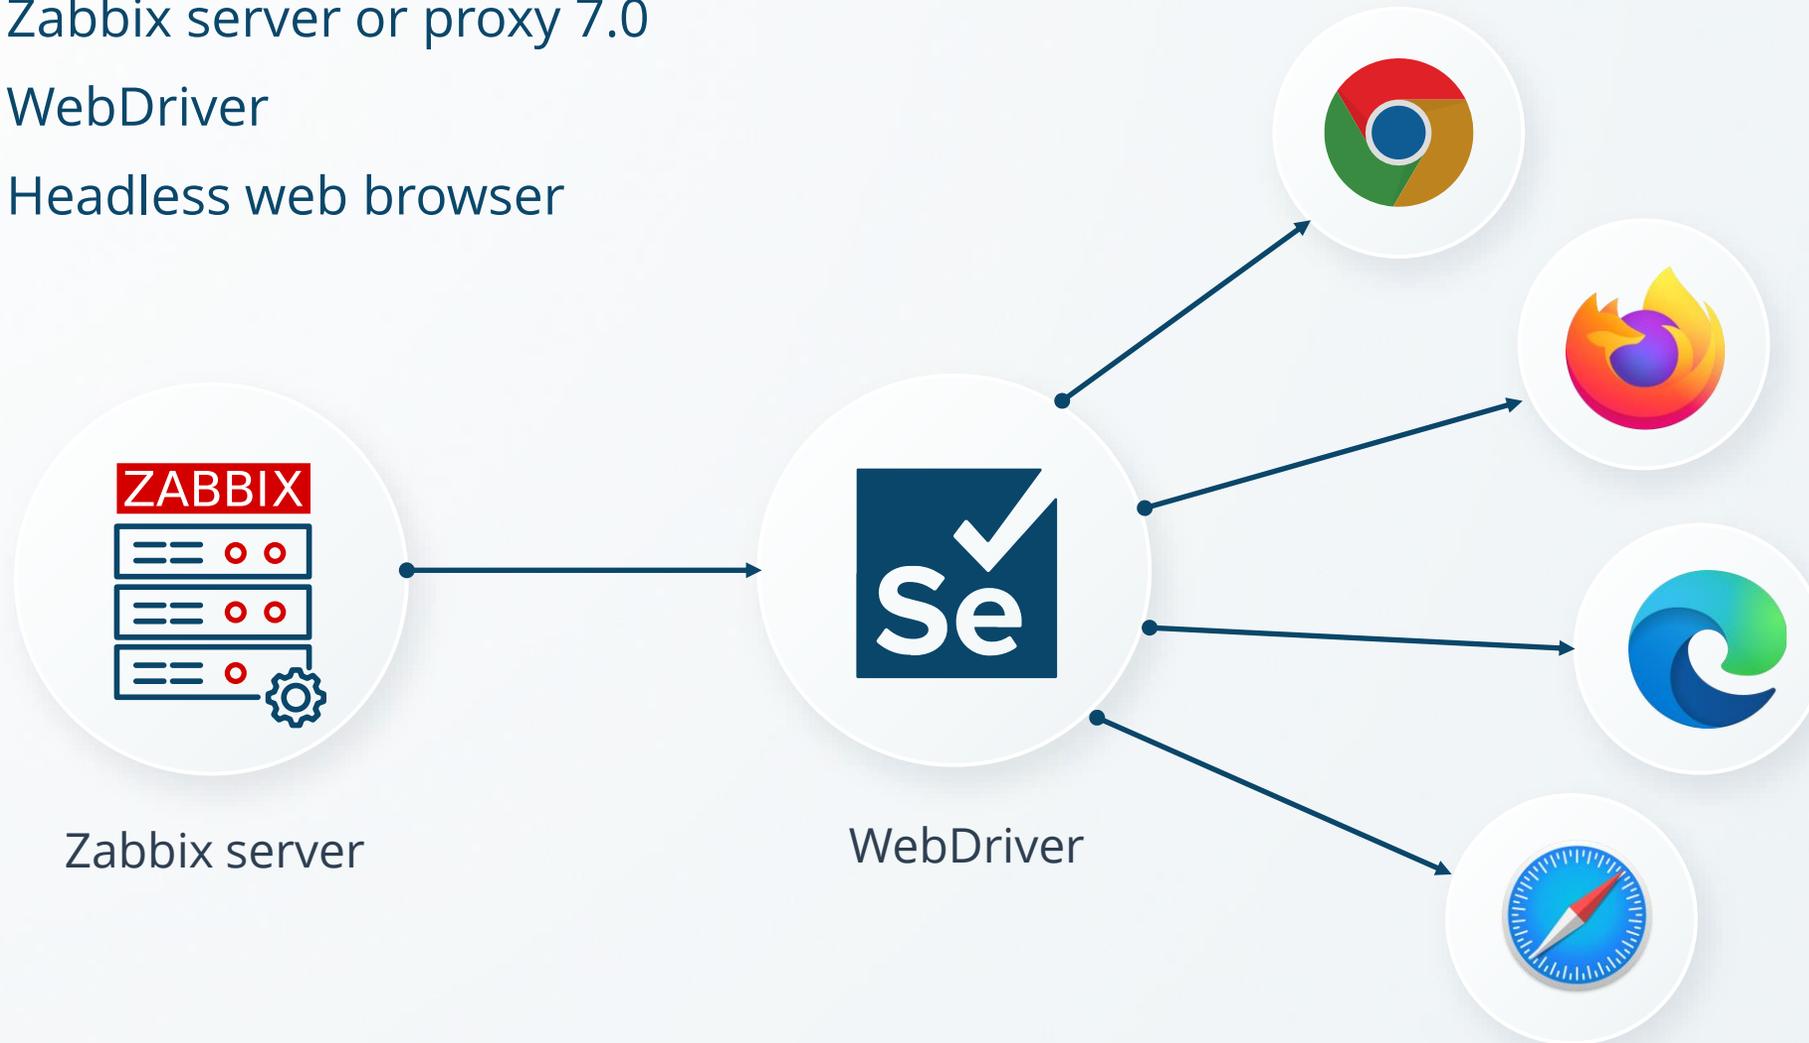

- Simple HTTP requests. You can use them to monitor the availability of your API endpoints or perform simple HTTP checks for single-resource availability

Website monitoring setup

There are several components required for browser monitoring:

- ▶ Zabbix server or proxy 7.0
- ▶ WebDriver
- ▶ Headless web browser

The most convenient way, to get the webdrivers is to use containers:

- ▶ To install the containers, login via SSH and execute this command on you VM

```
# podman run --name webdriver -d \  
-p 4444:4444 \  
-p 7900:7900 \  
--shm-size="2g" \  
--restart=always -d docker.io/selenium/standalone-chrome:latest
```

- ▶ Check if the container is now running

```
# podman ps
```

```
e4e... docker.io/selenium/standalone-chrome:latest :4444->4444/tcp, :7900->7900/tcp, 4444/tcp, 5900/tcp webdriver
```

The installed container includes:

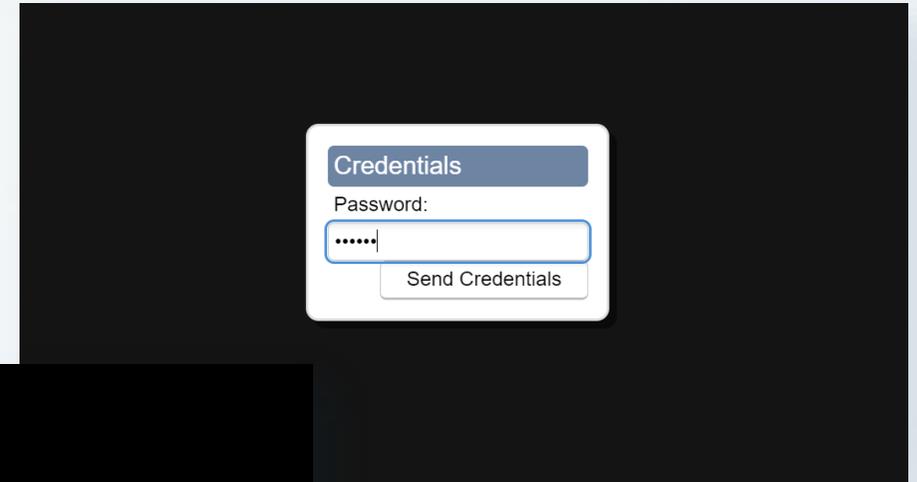

- ▶ Latest version of Standalone Chrome (for Browser item type)
- ▶ noVNC (to inspect visually container activity with browser)

- ▶ Open the address <http://<your-ip-address>:7900> using browser
- ▶ Check that noVNC page is accesible

- ▶ Press connect

- ▶ After pressing connect, there will be a prompt for password
- ▶ Password is "secret"
- ▶ After entering password, press Send Credentials
- ▶ You will see the Selenium Grid
- ▶ This can be later used to confirm browser behaviour

- ▶ Now edit the Zabbix server configuration file `/etc/zabbix/zabbix_server.conf`
 - change as shown below

```
# nano /etc/zabbix/zabbix_server.conf
```

```
### Option: WebDriverURL
#   WebDriver interface HTTP[S] URL. For example http://localhost:4444 used with
#   Selenium WebDriver standalone server.
#
# WebDriverURL=
WebDriverURL=http://localhost:4444

### Option: StartBrowserPollers
#   Number of pre-forked instances of browser item pollers.
#
# Range: 0-1000
# StartBrowserPollers=1
StartBrowserPollers=5
```

- ▶ Save the changes and restart Zabbix server to apply them

```
# systemctl restart zabbix-server
```

- ▶ Now we can use Browser items

Browser item

In Zabbix 7.0, a new item type is introduced: Browser

- ▶ Based on JavaScript
- ▶ Supports the browser class
- ▶ Support various new methods to work with pages

New item

Item Tags Preprocessing

* Name

Type

* Key

Type of information

Name	Value	Action
<input type="text"/>	<input type="text"/>	<input type="button" value="Remove"/>

[Add](#)

* Script

* Update interval

JavaScript

```
1 var browser = new Browser(Browser.chromeOptions());
2
3 try {
4     browser.navigate("http://example.com");
5     browser.collectPerfEntries();
6 }
7 finally {
8     return JSON.stringify(browser.getResult());
9 }
```

65346 characters remaining

The browser item can take screenshots of the monitored pages:

Item

Item Tags 1 Preprocessing 1

* Name Website {\$WEBSITE.DOMAIN} Screenshot

Type Dependent item

* Key website.screenshot

Type of information Binary

* Master item Website by Browser: Website {\$WEBSITE.DOMAIN} Get data

* History Do not store Store up to 31d

Description Website {\$WEBSITE.DOMAIN} screenshot.

Enabled

- ▶ To take a screenshot of the page – use the **getScreenshot()** method
- ▶ Screenshot is included in the JSON object in base64 format
- ▶ It is extracted into a **binary dependent item**
- ▶ Can be viewed on the dashboards or sent via media type

Screenshot size: up to 8K.

- ▶ Default screenshot size 1920x1080px.
- ▶ Screenshot can be displayed using the "Item history" widget.
- ▶ Screenshot size is specified by the ***setScreenSize(x,y)*** method.

The image displays a screenshot of the Zabbix website. On the left, there is a table with two columns: 'Timestamp' and 'Screenshot'. The table contains five rows of data, each showing a timestamp and a corresponding screenshot of the Zabbix dashboard. The timestamps are: 2024-05-22 01:46:28 PM, 2024-05-22 01:44:28 PM, 2024-05-22 01:43:26 PM, 2024-05-22 01:42:28 PM, and 2024-05-22 01:41:28 PM. On the right, there is a promotional banner for the Zabbix event in Riga, featuring the text 'The most important Zabbix event of 2024 is almost here!' and a 'Register Now!' button. Below the banner, there are logos for NEXON, ESA, ICANN, SEAT, and orange, and the text 'Monitor anything' and 'Get a single pane of glass view of your whole IT infrastructure stack'.

Timestamp	Screenshot
2024-05-22 01:46:28 PM	[Screenshot of Zabbix dashboard]
2024-05-22 01:44:28 PM	[Screenshot of Zabbix dashboard]
2024-05-22 01:43:26 PM	[Screenshot of Zabbix dashboard]
2024-05-22 01:42:28 PM	[Screenshot of Zabbix dashboard]
2024-05-22 01:41:28 PM	[Screenshot of Zabbix dashboard]

BROWSER OBJECTS AND METHODS

Browser object - manages WebDriver session through out the whole item execution.

- ▶ (initialize session => execute all actions in script => close session).

Element - an element that is found on the opened webpage.

Cookie - a cookie returned by the ***getCookies()*** method.

Alert - a webpage alert returned by the ***getAlert()*** method.

Result - represents the collected statistics data gathered by ***getResult()*** method. Contains the following:

- ▶ Session statistics (in example total session duration)
- ▶ Error information (if such occurred)
- ▶ Performance data (if such collected)
- ▶ Any collected data that is written directly to the result object

Browser object methods:

Retrieving predefined browser options	chromeOptions() firefoxOptions() edgeOptions() safariOptions()	Error related operations	getError() setError(message) discardError()
Timeout management	setScriptTimeout(timeout) setSessionTimeout(timeout) setElementWaitTimeout(timeout)	URL and page related operations	navigate(url) getUrl() getPageSource() getAlert() getCookies() addCookie(cookie)
Collecting data	collectPerfEntries(mark) getRawPerfEntries() getResult() getScreenshot()	Locating elements on page	findElement(strategy, selector) findElements(strategy, selector)

Element object methods:

getAttribute(name)	Return the value of the given attribute of the object, for example: class, id, style, display e.t.c.	click()	Click on element.
getProperty(name)	Return the value of the given property of the object, for example: className, baseUrl.e.t.c.	sendKeys(keys)	Send keys to element. Method is used for filling data into editable elements.
getText()	Return element text.	clear()	Remove the content of editable element

Out-of-the-box approach

- ▶ Open Zabbix user interface in your web browser
 - Address: `http://<your-ip-address>/zabbix`
 - Login: Admin
 - Password: zabbix (you should change the password, but don't lose it)
 - Press 'Sign in'

The image shows a screenshot of the Zabbix login page. At the top center, the word "ZABBIX" is displayed in a red box. Below it, there are two input fields: "Username" with the text "Admin" entered, and "Password" with a masked password of six dots. Below the password field is a checkbox labeled "Remember me for 30 days" which is checked. At the bottom of the form is a blue button labeled "Sign in". Three callout boxes provide additional instructions: one on the left points to the "Admin" username with the text "Use the default administrator login: **Admin**"; one on the right points to the masked password with the text "Use the default password for Admin: **zabbix**"; and one at the bottom left points to the "Sign in" button with the text "Press **Sign in**".

Agenda

Day 1: Oct 4, 2024
Riga (GMT+3) MAIN STAGE

- 09:00 Registration
- 09:30 Summit Opening
- 09:40 KEYNOTE
Alexei Vladishev, CEO & Founder, ZABBIX, Latvia
- 10:20 When Zabbix Meets AI - Enhancing Zabbix monitoring workflows with AI features
Tomas Hermanek, CEO & Founder, inRMAX s.r.o., Czech Republic
- 10:50 TBA
Dmitrijs Lamberts, Head of Technical Support, Zabbix, Latvia
- 11:10 Browser monitoring in Zabbix 7.0: use case overview
Aleksandrs Petrovs-Gavrilovs, Technical Support Engineer, Trainer, Zabbix, Latvia
- 11:30 Lunch
- 12:30 Zabbix meets AI - Leverage machine learning for

Day 1: Oct 4, 2024
Riga (GMT+3) BUSINESS TRACK

- 14:30 The evolution of IT monitoring landscape
Luciano Alves, Country Manager, Zabbix Latam, Brazil
- 15:00 When two OpenSource projects meet
Evgeny Yurchenko, Founder & Tech lead, BGMot, Canada
- 15:30 Zabbix for MSPs
Andre Morton, AGM Network Consultancy, United Kingdom
- 16:00 Coffee break
- 16:30 Business impact of root cause problem detection
Steve Destivelle, CEO, I2I-T, France

► In the item script field paste the script and save the item:

```
var browser, result;
var opts = Browser.chromeOptions();
opts.capabilities.alwaysMatch['goog:chromeOptions'].args = []
browser = new Browser(opts);
browser.setScreenSize(Number(1980), Number(1020));
screens = [];
const screenshot = '';
try {

var params = JSON.parse(value); // Parse the JSON string containing parameters passed from Zabbix.

browser.navigate(params.url);
screens.push(browser.getScreenshot());

// enter username
var el = browser.findElement(params.strategy, params.loginfield);
if (el === null) {throw Error("cannot find name input field");}
el.sendKeys(params.username);
screens.push(browser.getScreenshot());

// enter password
el = browser.findElement(params.strategy, params.passwordfield);
if (el === null) { throw Error("cannot find password input field"); }
el.sendKeys(params.password);
screens.push(browser.getScreenshot());

// login
el = browser.findElement(params.strategy, params.button);
if (el === null) { throw Error("cannot find login button"); }
el.click();
screens.push(browser.getScreenshot());
browser.collectPerfEntries("login");

result = browser.getResult();
}
catch (err) {
  if (!(err instanceof BrowserError)) {
    browser.setError(err.message);
  }
  result = browser.getResult();
  result.error.screenshot = browser.getScreenshot();
}
finally {
  return JSON.stringify(result);
}
```

- ▶ If you wish, you can open noVNC tab (<https://<your-IP-address>:7900>)
- ▶ Press test in the item and observe the visualisation in noVNC

The screenshot shows the ZABBIX System Dashboard in a web browser. The page is titled "System Dashboard" and features a navigation bar with "Dashboards", "Projects", and "Issues" menus. The main content area is divided into several sections:

- Introduction:** A welcome message for ZABBIX Support System users, including a disclaimer about JIRA tickets and data privacy.
- Login:** A form for user authentication with fields for "Username" (containing "lagavazzj") and "Password", along with a "Remember my login" checkbox and "Log In" and "Login SSO" buttons.
- Projects:** A list of three project categories, each with a lead name:
 - ZABBIX BUGS AND ISSUES (ZBX) - Lead: Zabbix Support Team
 - ZABBIX CONTRIBUTION (ZBXCTR) - Lead: Aleksandre Sebiskveradze
 - ZABBIX FEATURE REQUESTS (ZBXNEXT) - Lead: Rostislav Palvoda
- Quick Links:** A section with "Navigation" links for "Browse Projects" and "Search for Issues".

The footer includes the Atlassian logo and text: "Atlassian Jira Project Management Software · About Jira · Report a problem. Powered by a free Atlassian Jira open source license for SIA Zabbix. Try Jira - buy tracking software for your team."

► Confirm in the frontend, that test was successful

The screenshot displays the Zabbix 'Test item' configuration interface. The 'Test item' window is open, showing the following configuration:

- Get value from host:**
- Host address:** [Empty text field]
- Port:** [Empty text field]
- Test with:** **Server** (selected), Proxy
- Value:** `{duration":17.9746356010437,"performance_data":{"details":{"mark":"login...`
- Time:** now
- Not supported:**
- Error:** error text
- Previous value:** [Empty text field]
- Prev. time:** [Empty text field]
- End of line sequence:** **LF** (selected), CRLF
- Macros:**
 - `{LINK}` → `https://support.zabbix.com/`
 - `{LOGIN.FORM.BUTTON.PATH}` → `input#login`
 - `{LOGIN.FORM.FIELD.PATH}` → `input#login-form-username`
 - `{LOGIN.FORM.PASS.FIELD.PATH}` → `input#login-form-password`
 - `{LOGIN.FORM.STRATEGY.TYPE}` → `css selector`
 - `{PAGE.PASSWORD}` → `*****`
 - `{PAGE.USERNAME}` → `lagavazz`
- Result:** Result converted to Text `{duration":17.9746356010437,"performance_data":{"details":{"mark":"login","navigat`

Below the configuration, the 'Add' button is visible. The 'Timeout' is set to 'Global' with an 'Override' of '60s'. The 'History' is set to 'Do not store' with 'Store up to' of '31d'. The 'Populates host inventory field' is set to '-None-'. The 'Description' field is empty.

A detailed test result is shown in a separate window, displaying a JSON object with performance data and navigation details:

Now, back again at the Zabbix support portal host

- ▶ Open and clone the **Support portal authentication** item
 - Item name Support portal screenshots
 - Key support.screens
 - Script Modify the line 46, by replacing:
return **JSON.stringify(result)**; with
return **JSON.stringify(screens)**;

The image shows a screenshot of the Zabbix 'New item' configuration form. The form is titled 'New item' and has three tabs: 'Item', 'Tags', and 'Preprocessing'. The 'Item' tab is selected. The form contains the following fields:

- * Name: Support portal screenshots
- Type: Browser (dropdown menu)
- * Key: support.screens (with a 'Select' button)
- Type of information: Text (dropdown menu)

To the right of the form, there is a code snippet showing the modification of line 46 in a script:

```
45 finally {  
46     return JSON.stringify(screens);  
47 }
```

- ▶ Apply, Test and Add the item
- ▶ Note how the output now contains only screenshots

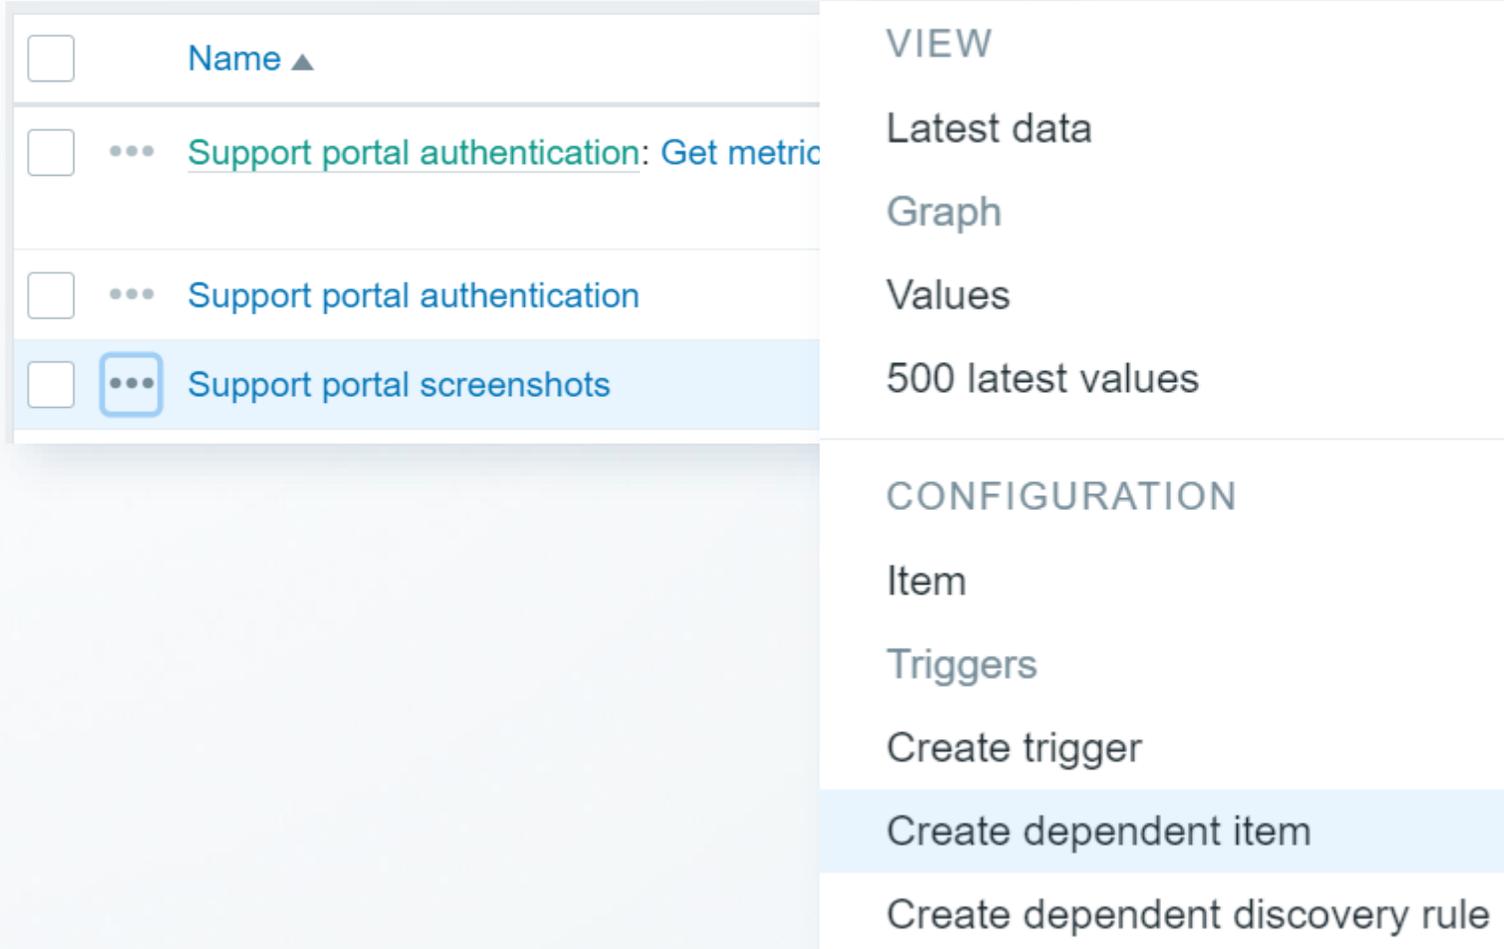

Screenshot is created for each step as can be seen in the script:

- ▶ Using that information we will create dependant items

```
15 |
16 | // enter username
17 | var el = browser.findElement(params.strategy, params.loginfield);
18 | if (el === null) {throw Error("cannot find name input field");}
19 | el.sendKeys(params.username);
20 | screens.push(browser.getScreenshot());
21 |
22 | // enter password
23 | el = browser.findElement(params.strategy, params.passwordfield);
24 | if (el === null) { throw Error("cannot find password input field"); }
25 | el.sendKeys(params.password);
26 | screens.push(browser.getScreenshot());
```

Click on the three dots, near the new Support portal screenshots item

▶ Select create dependent item

The screenshot shows a Zabbix interface with a list of items. The item 'Support portal screenshots' is selected, and a context menu is open over it. The menu is divided into two sections: 'VIEW' and 'CONFIGURATION'. The 'VIEW' section includes options for 'Latest data', 'Graph', 'Values', and '500 latest values'. The 'CONFIGURATION' section includes options for 'Item', 'Triggers', 'Create trigger', 'Create dependent item', and 'Create dependent discovery rule'. The 'Create dependent item' option is highlighted in blue.

Item Name	Context Menu Options
Name ▲	VIEW
Support portal authentication: Get metric	Latest data
Support portal authentication	Graph
Support portal authentication	Values
Support portal screenshots	500 latest values
	CONFIGURATION
	Item
	Triggers
	Create trigger
	Create dependent item
	Create dependent discovery rule

First screenshot will be

- ▶ Name Support portal screenshot
- ▶ Key login.screenshot

Type of information

Make screenshots for each step

<input type="checkbox"/>	Name ▲	Triggers	Key
<input type="checkbox"/>	... Authenticate to Jira		authenticate
<input type="checkbox"/>	... <u>Authenticate to Jira</u> : Authentication screenshot		step4
<input type="checkbox"/>	... <u>Authenticate to Jira</u> : Enter password screenshot		step3
<input type="checkbox"/>	... <u>Authenticate to Jira</u> : Enter username screenshot		step2
<input type="checkbox"/>	... <u>Authenticate to Jira</u> : Landing page screenshot		step1

This screenshot shows the 'Projects' section of the Zabbix Jira integration. It lists three projects: 'ZABBIX BUGS AND ISSUES (ZBX)' with lead 'Zabbix Support Team', 'ZABBIX CONTRIBUTION (ZBXCTR)' with lead 'Aleksandre Sebiakveratze', and 'ZABBIX FEATURE REQUESTS (ZBXNEXT)' with lead 'Rostislav Palivoda'. The interface is powered by Atlassian Jira Project Management Software.

This screenshot shows the 'Login' page of the Zabbix system. It features a 'Username' field with 'logavazz' entered, a 'Password' field with masked characters, and a 'Remember my login on this computer' checkbox. There are also links for 'Log in', 'Login SSO', and 'Can't access your account?'.

This screenshot shows the 'System Dashboard' of the Zabbix system. It includes an 'Introduction' section with a welcome message and a disclaimer. On the right, there are sections for 'Favorite Filters', 'Assigned to Me', 'Issues in progress', and 'Quick Links'. A notification bubble indicates a time zone preference update.
