What we will talk about

MQTT: small introduction to MQTT

- ▶ What's MQTT
- ▶ Use cases

How to get MQTT data into Zabbix

- ▶ Configuring the agent
- ▶ Configuring Zabbix

Dashboards

- ▶ Showing your data

ZABBIX '25
CONFERENCE
BENELUX

What's MQTT

- ▶ A lightweight data transport protocol
- ▶ Reliable delivery
- ▶ Bi-directional
- ▶ Publish or Subscribe to topics

The payload

Single values:

- ▶ sensor/room1/temperature: 20.6
- ▶ sensors/room1/humidity: 78
- ▶ sensor/room1/status: online

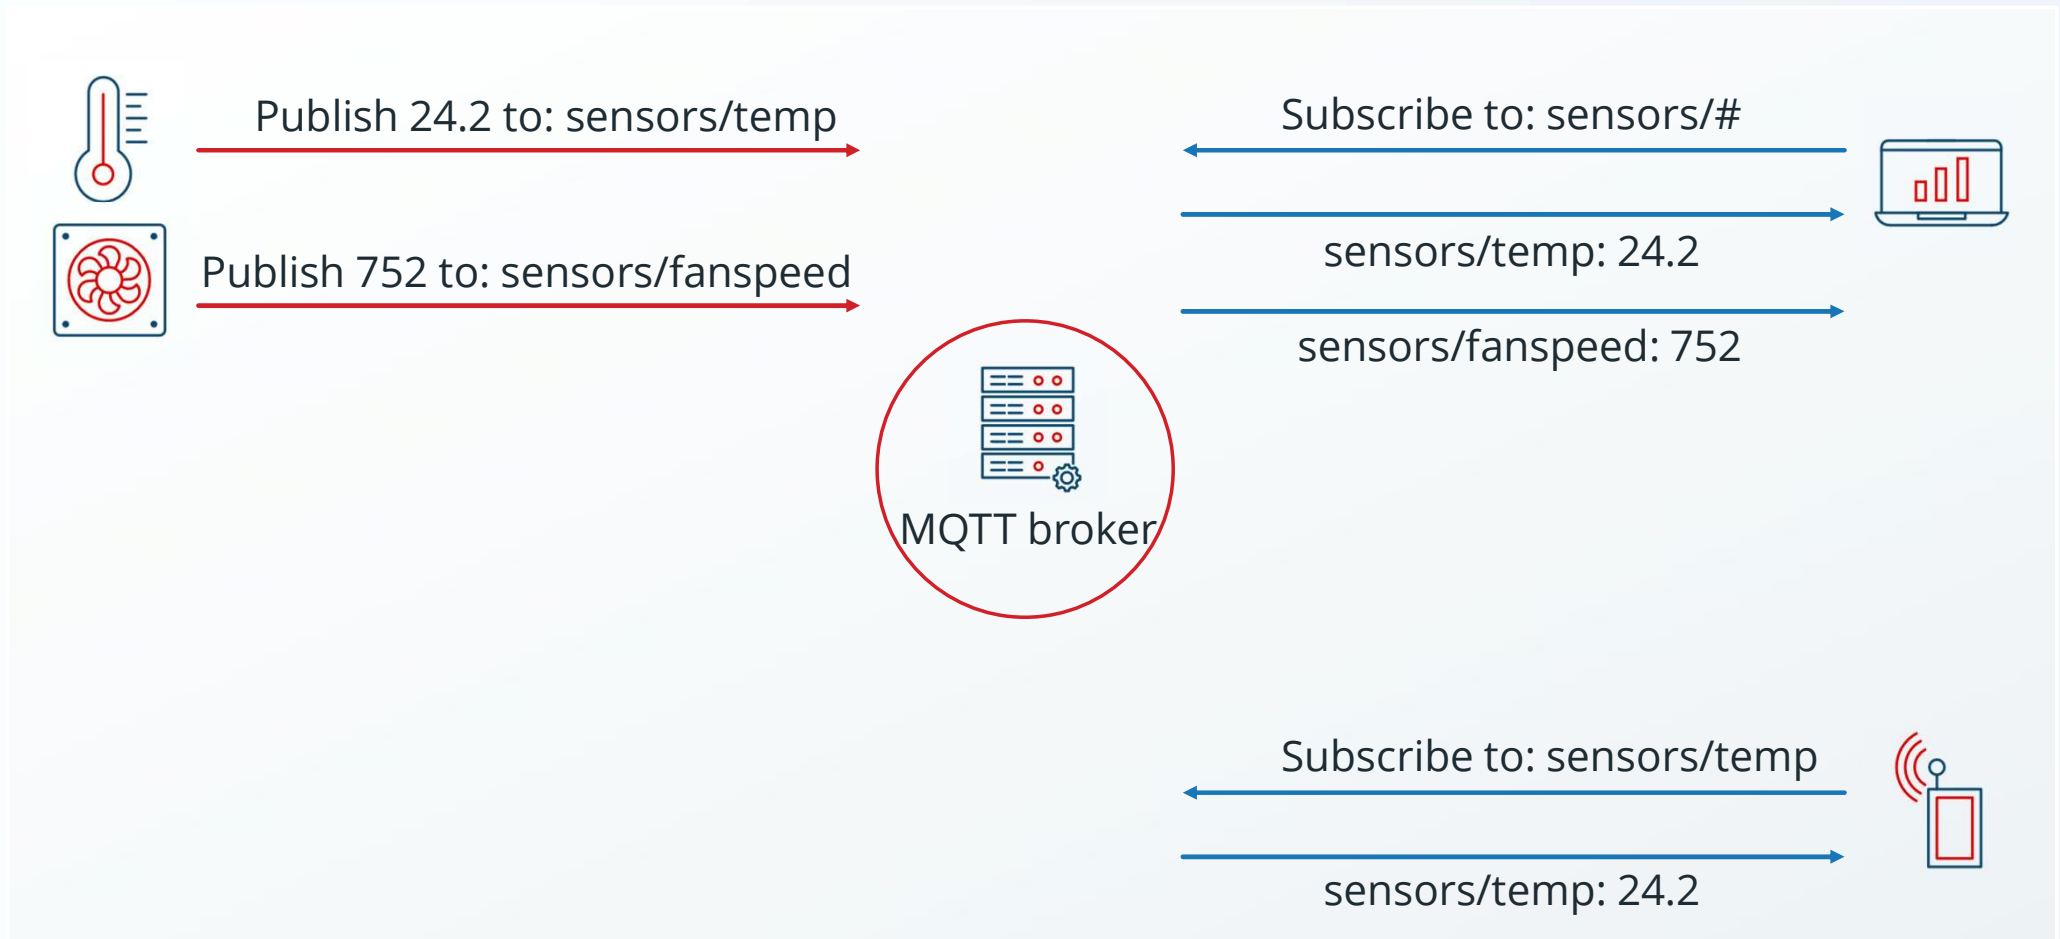

Multiple values:

- ▶ sensors/room1: {
 "temperature": 20.6,
 "humidity": 78,
 "status": "online"
}

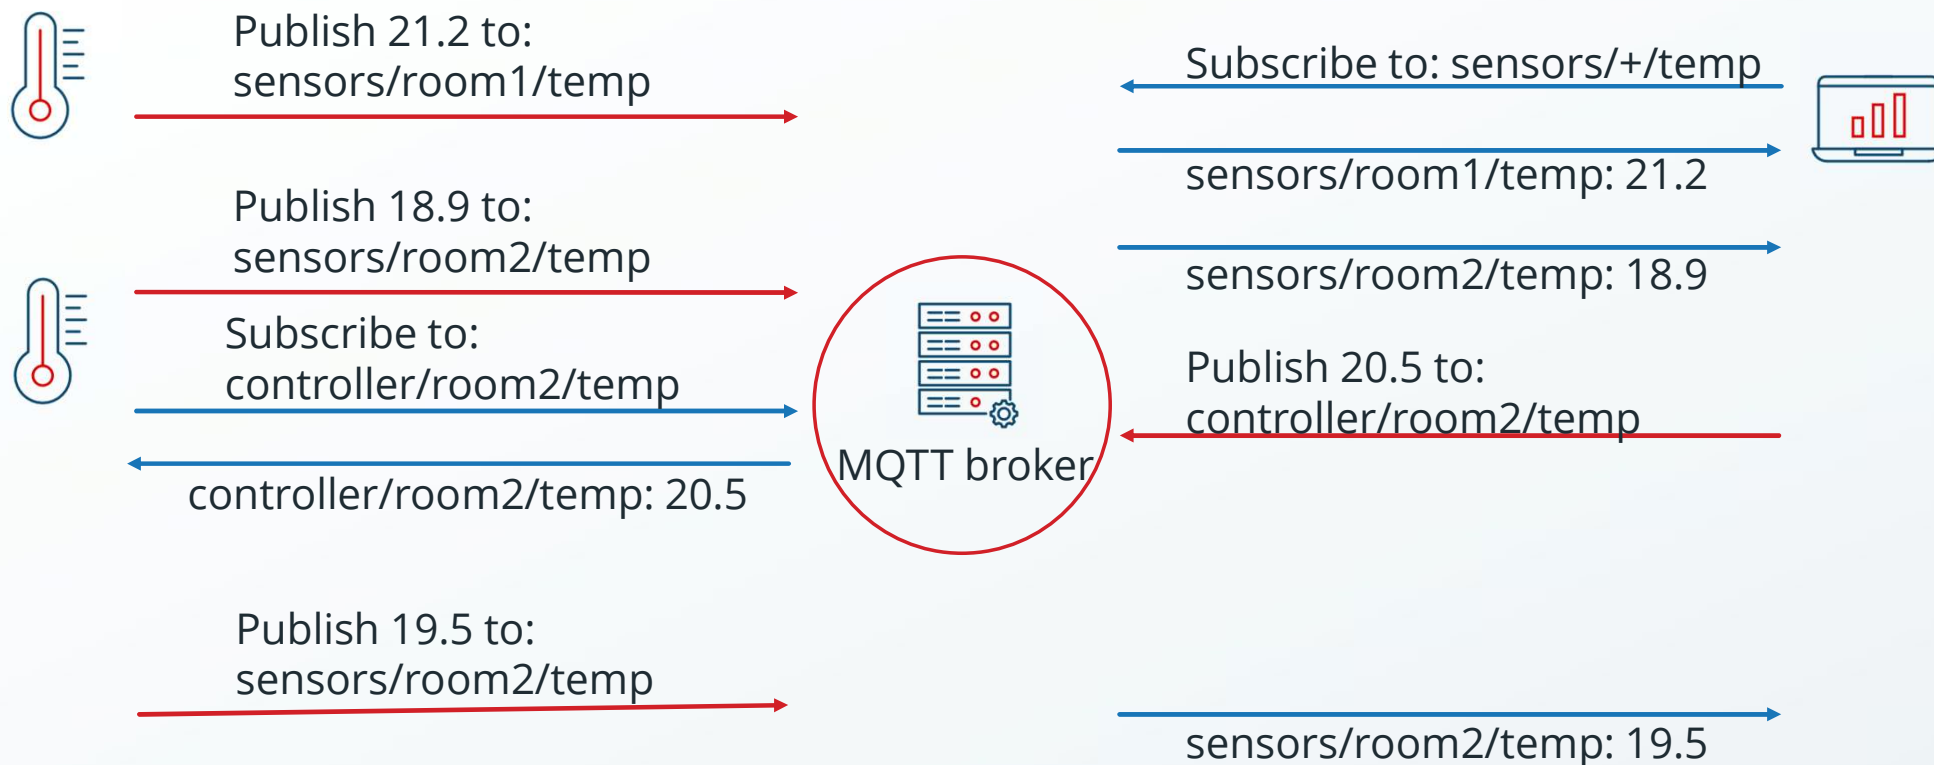

```
<?xml version="1.0" encoding="UTF-8" ?>  
<root>  
  <temperature>20.6</temperature>  
  <humidity>78</humidity>  
  <status>online</status>  
</root>
```

Publish and Subscribe example 1

Publish and Subscribe example 2

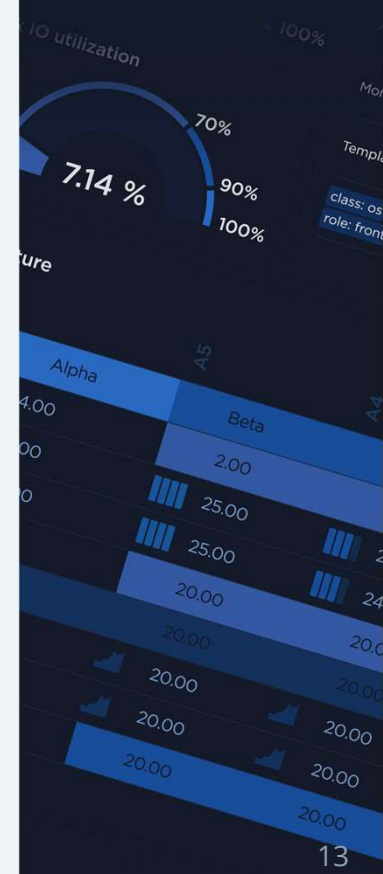

Usecases

- ▶ Low-power devices
 - ▶ Low-cpu devices
 - ▶ Low-bandwidth devices
-
- ▶ Example: Delivery trucks to track position (and speed) over cellular
 - ▶ Example: Measure soil pH and moisture over LoRa
 - ▶ Example: Measure temperatures (LoRa/WiFi/Zigbee/Z-wave)

ZABBIX '25
CONFERENCE
BENELUX

LoRa networks

- ▶ Devices connect to a gateway
- ▶ Gateway forwards message to a server
- ▶ In Europe over 433 and 868Mhz (915Mhz for America)
- ▶ Range up to 10km

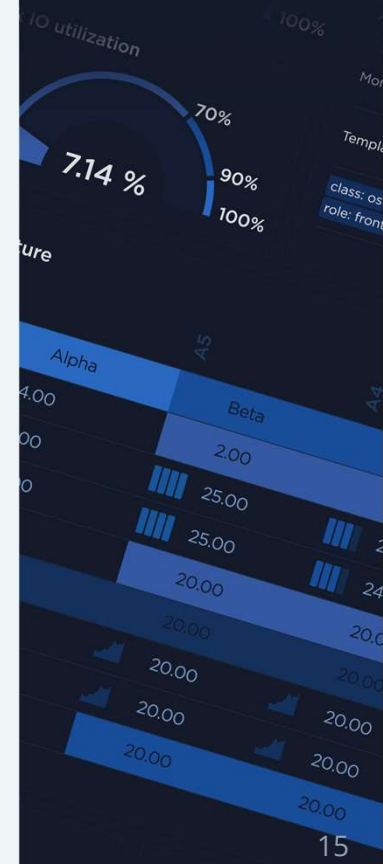

ZABBIX '25
CONFERENCE
BENELUX

Configuring the agent

- ▶ Agent2 is required to use MQTT plugin
- ▶ Configure the defaults
- ▶ Configure optional sessions

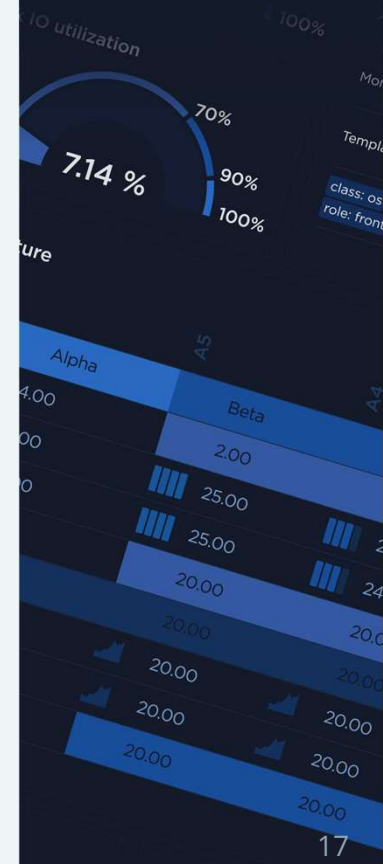

ZABBIX '25
CONFERENCE
BENELUX

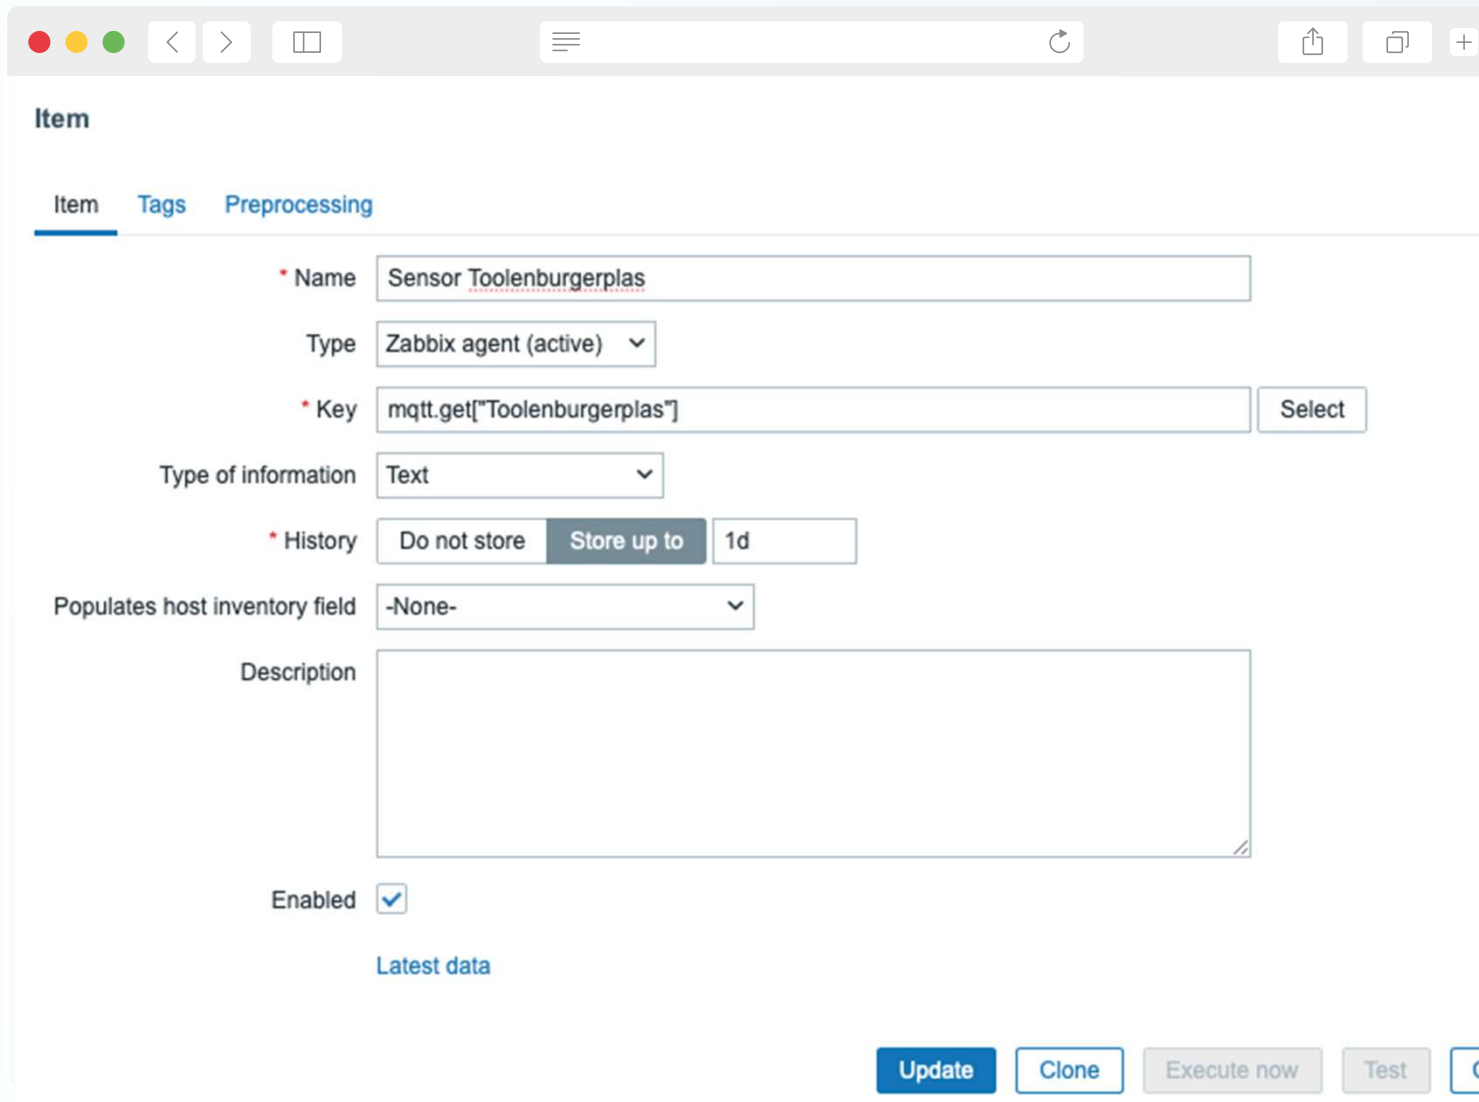

Configuring Zabbix

- ▶ Creating a master item
- ▶ Creating dependent items

ZABBIX '25
CONFERENCE
BENELUX

The screenshot shows the Zabbix web interface for configuring an item. The browser window title is "Item". The page has three tabs: "Item" (selected), "Tags", and "Preprocessing". The configuration fields are as follows:

- Name:** Sensor Toolenburgerplas
- Type:** Zabbix agent (active)
- Key:** mqtt.get["Toolenburgerplas"] (with a "Select" button)
- Type of information:** Text
- History:** Do not store (selected), Store up to 1d
- Populates host inventory field:** -None-
- Description:** (empty text area)
- Enabled:**

At the bottom, there are buttons for "Update", "Clone", "Execute now", "Test", and "C".

Item configuration
Mqtt.get["Session"]

Item configuration
Mqtt.get

The screenshot shows the Zabbix web interface. The top navigation bar includes 'ZABBIX', 'Demo: 2 items', and 'View as Values'. The left sidebar contains navigation options like 'Dashboards', 'Monitoring', 'Problems', 'Hosts', 'Latest data', 'Maps', 'Discovery', 'Services', 'Inventory', 'Reports', 'Data collection', 'Alerts', 'Users', and 'Administration'. The main content area displays a table with columns for 'Timestamp', 'Item', and 'Value'. Two rows of data are visible, each containing a timestamp and an item name, followed by a JSON object representing sensor data. A red circle highlights the JSON data in the first row, and a larger red circle highlights the JSON data in the second row. A red arrow points from the text 'JSON data' to the first row's JSON data.

Timestamp	Item	Value
2025-02-06 12:57:03 PM	Demo: Sensor Toolenburgerplas	{ "watertemp": 5.4, "battery": 3.61, "signal": -116, "temp": 7.6 }
2025-02-06 12:56:19 PM	Demo: Sensor Haarlemmermeerbos	{ "watertemp": 5.2, "battery": 3.6, "signal": -112, "temp": 7.3 }

JSON data

Value

```
{  
  "watertemp": 5.4,  
  "battery": 3.61,  
  "signal": -116,  
  "temp": 7.6  
}
```

```
{  
  "watertemp": 5.2,  
  "battery": 3.6,  
  "signal": -112,  
  "temp": 7.3  
}
```
