# Agenda

---

- ▶ \$ whoami
- ▶ Track record Zabbix last year
- ▶ Installation & upgrade considerations
- ▶ “Zero downtime” migration incl. upgrade
- ▶ Anecdotes
- ▶ Questions?

**ZABBIX '25**  
CONFERENCE  
BENELUX

# rkollman@zabbix:~\$ whoami

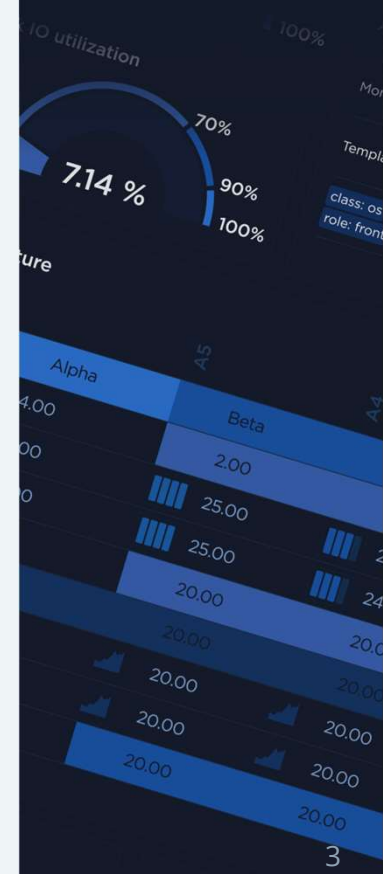

---

Raimond Kollman

- ▶ 25+ years open source
  - Focus on monitoring and observability
- ▶ 2022: started at Xifeo ICT B.V.
  - Zabbix partner == more focus on Zabbix 😊
  - ZCS/ZCP 6.0 and 7.0
  - ZCT 7.0 since January 2025
- ▶ Next goal: ZCE

**ZABBIX '25**  
CONFERENCE  
BENELUX

# rkollman@zabbix:~\$ hobbies

---

- ▶ Drone video & photography
  - Observe things from a higher perspective 😊

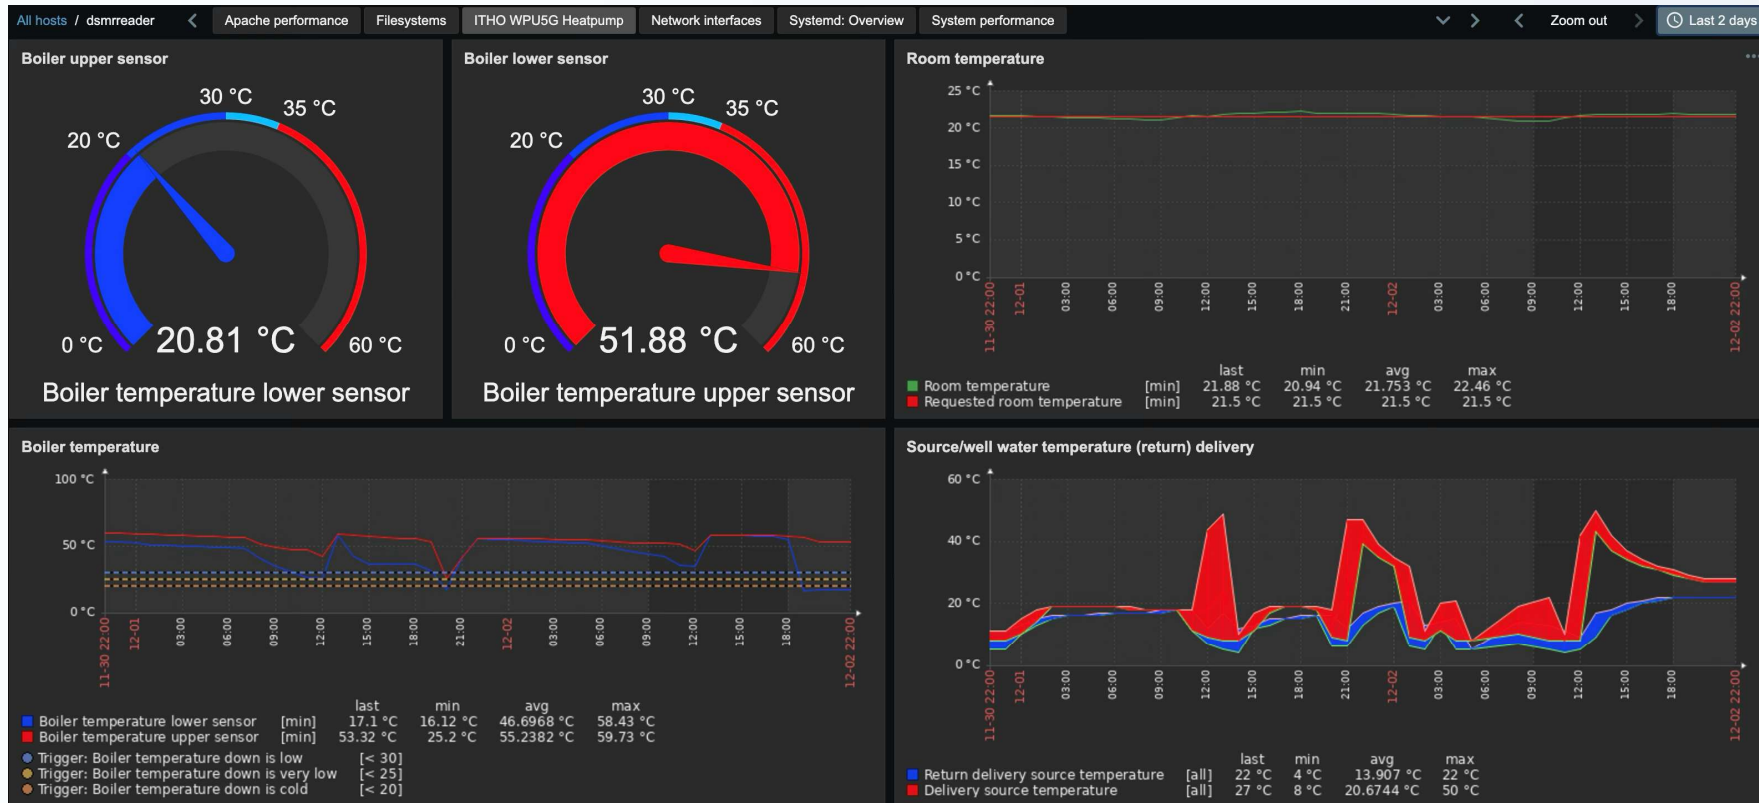

Full stack of drones

**ZABBIX '25**

## ► Observability & home automation

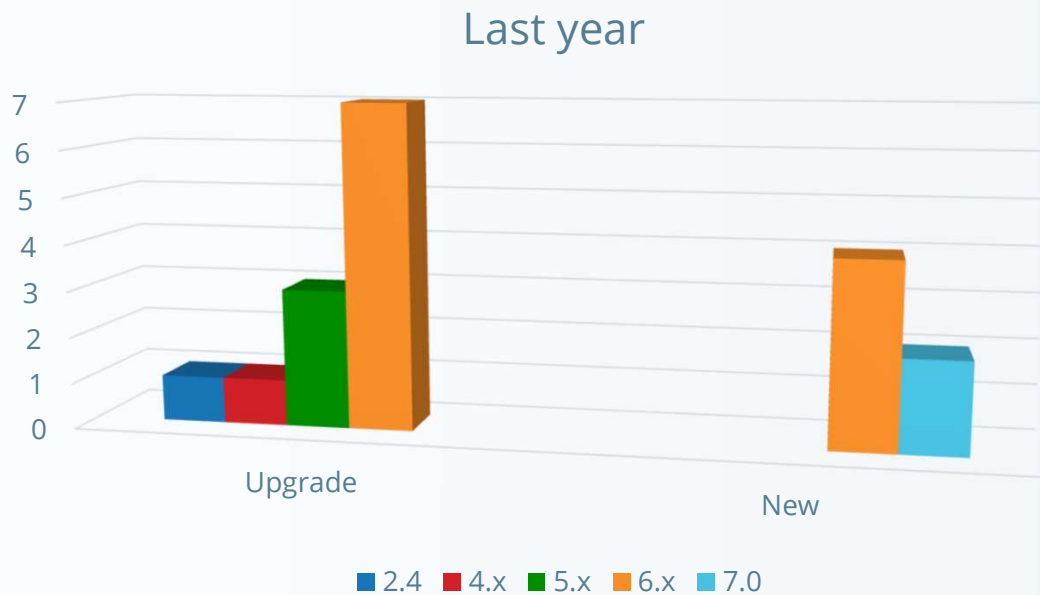

**ZABBIX '25**  
CONFERENCE  
BENELUX

# My track record Zabbix last year

- ▶ New installations of Zabbix
- ▶ Upgrades of Zabbix
  - In-place & migrations (new OS/DB/Zabbix)

**ZABBIX '25**  
CONFERENCE  
BENELUX

# New installations

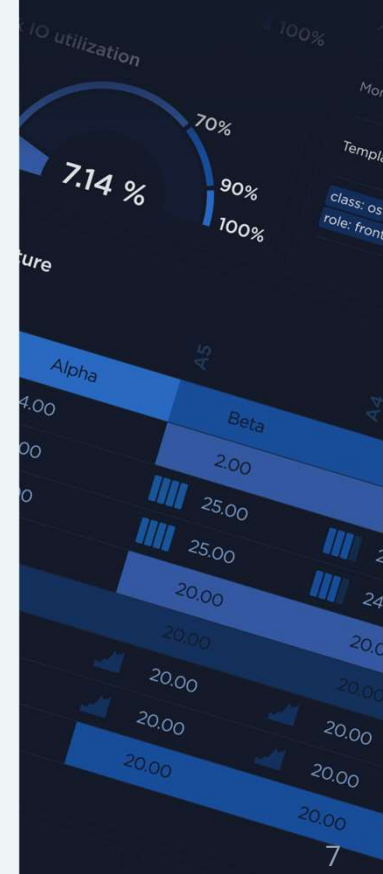

---

Mostly replacing other monitoring systems

- ▶ Nagios
- ▶ PRTG
- ▶ Shell-scripts combined with MRTG

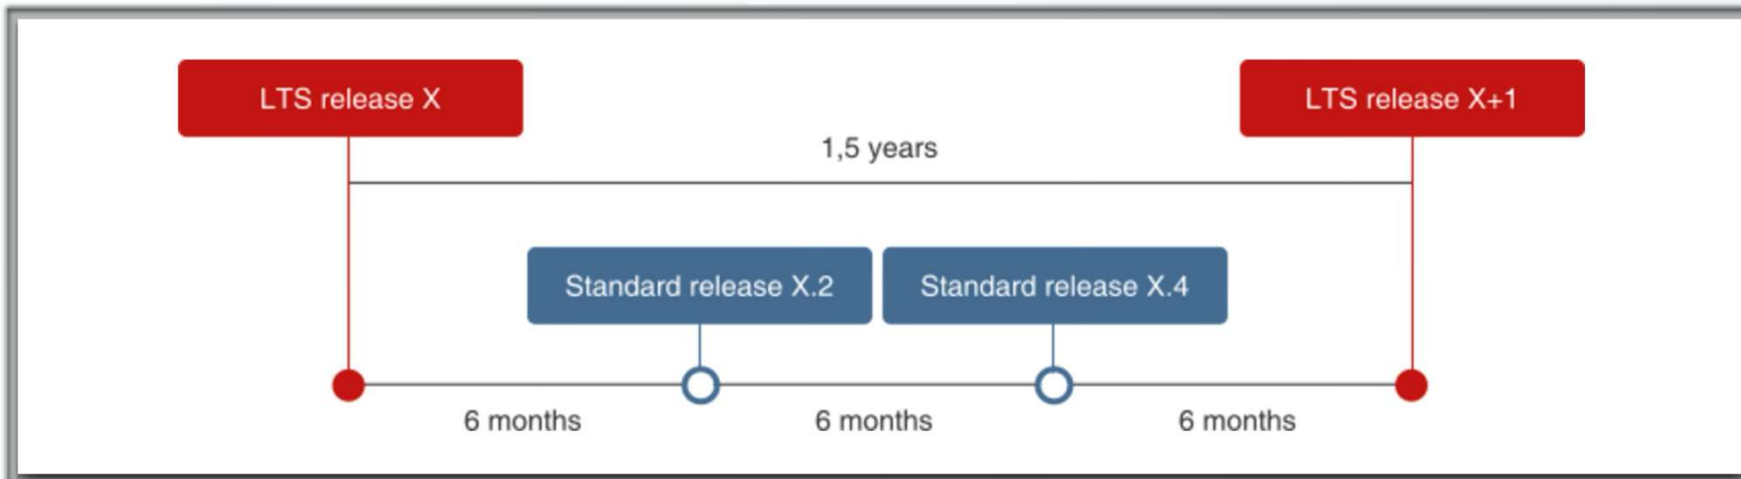

**ZABBIX '25**  
CONFERENCE  
BENELUX

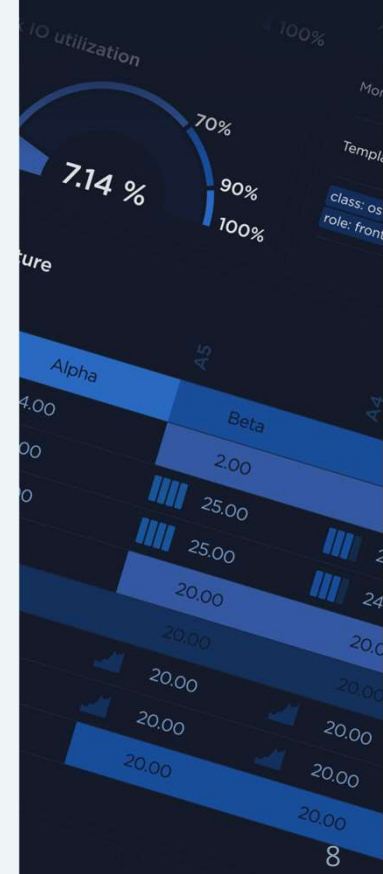

# Long term or standard release?

Installation consideration

**ZABBIX '25**  
CONFERENCE  
BENELUX

# My installation considerations

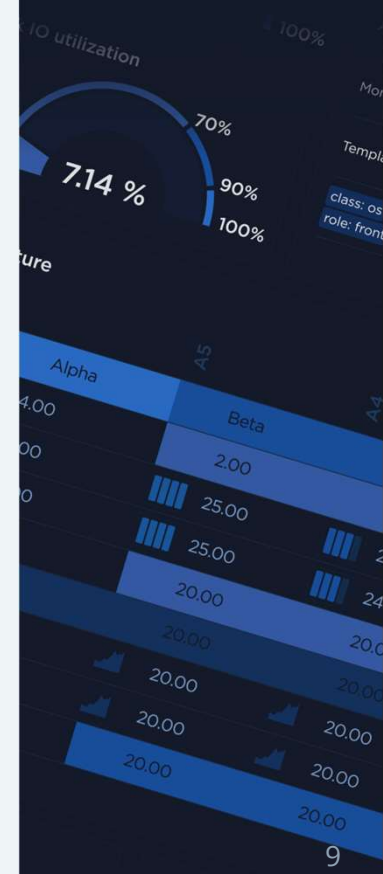

---

## Database (not which one 😊)

- ▶ On Zabbix server
  - Easy connection setup between Zabbix & database
  - Secure connection between Zabbix & database
  - that's all...
- ▶ Separate server/instance
  - Specific performance tuning for databases
  - (OS) upgrades for Zabbix don't require "big bang" upgrade
  - Possibility for high available database

**ZABBIX '25**  
CONFERENCE  
BENELUX

# Zabbix server/proxy config

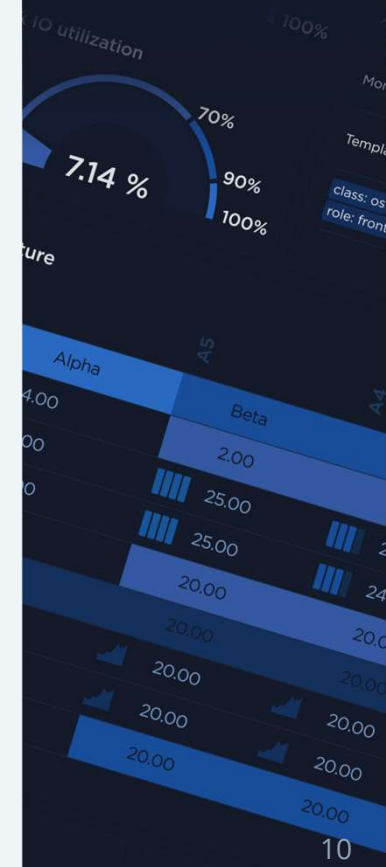

---

My best practice: keep config default

- ▶ Include your settings at the `_END_` of default config
  - `Include=/etc/zabbix/zabbix_server-xifeo.conf`
- ▶ Always the latest default settings
  - Asynchronous pollers (Zabbix 6 -> 7)
- ▶ Clear what's specific for current system
- ▶ Easy to re-use config (restore or multiple proxies)
- ▶ Easy to use with automation

**ZABBIX '25**  
CONFERENCE  
BENELUX

# Tags

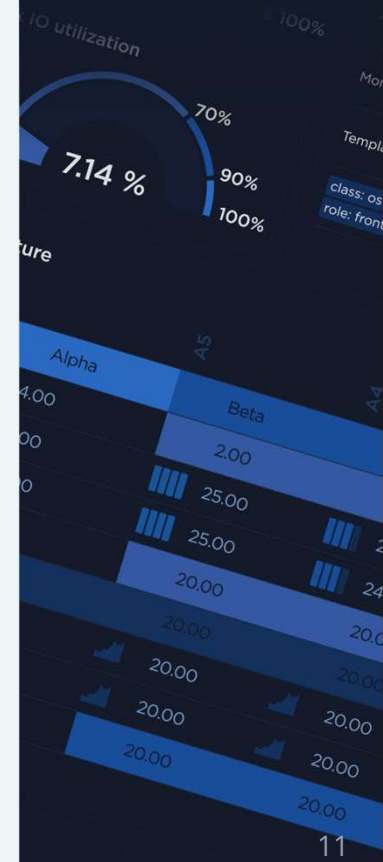

---

Start using tags immediately!

- ▶ Used for triggers/alerts on specific tags
- ▶ Limit specific users to relevant problems
- ▶ Maintenance periods for specific tags
- ▶ Build service monitoring
- ▶ (Global) event correlation

**ZABBIX '25**  
CONFERENCE  
BENELUX

# Upgrades

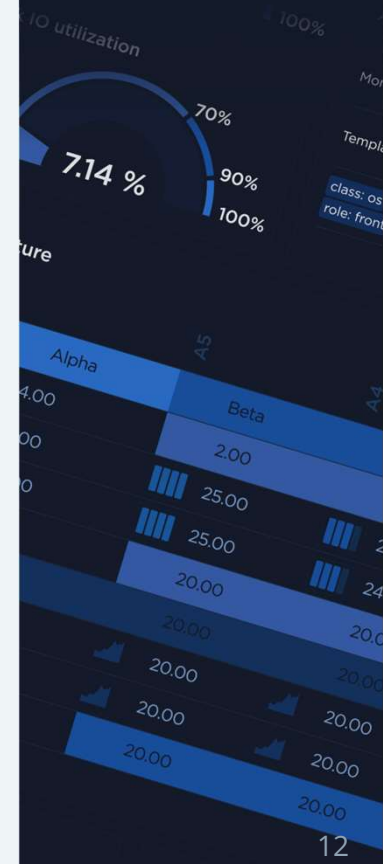

---

## Different types of upgrades

- ▶ In-place upgrades
  - “Easy” thanks to Zabbix
  - Upgrade/replace templates
- ▶ Migration (new instance/VM/server)
  - New OS & database
  - Migrating data
  - Upgrade/replace templates
  - Testing
  - Swap old -> new

**ZABBIX '25**  
CONFERENCE  
BENELUX

# Templates upgrade

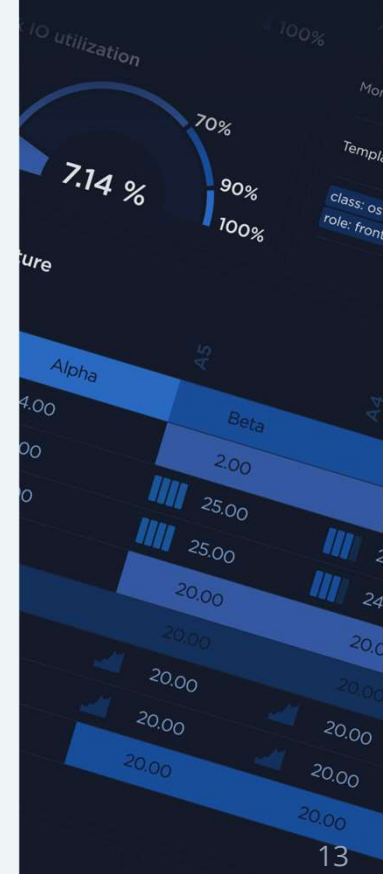

---

Upgrading modified templates isn't automatically

- ▶ Basic layer of nested templates
  - Based on OS
  - Databases/webserver/specific services
- ▶ Nesting: upgrade of base template easy
  - Nested templates with specific macro-settings/items & triggers untouched
  - Testing new thresholds/items easy

ZABBIX '25  
CONFERENCE  
BENELUX

Templates										?	Create template	Import	
													Filter
<input type="checkbox"/> Name ▲	Hosts	Items	Triggers	Graphs	Dashboards	Discovery	Web	Vendor	Version	Linked templates	Linked to templates	Tags	
<input type="checkbox"/> Xifeo Linux	Hosts	Items 10	Triggers 11	Graphs 6	Dashboards	Discovery 5	Web			Linux by Zabbix agent active	Xifeo Linux MariaDB or MySQL

# Nested templates

# Release & upgrade notes

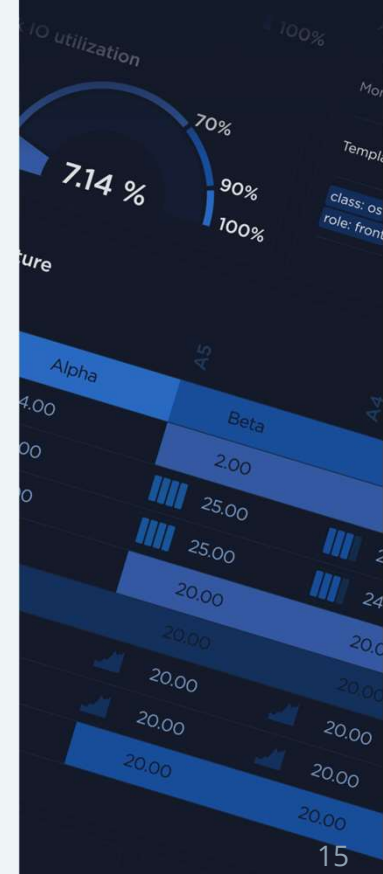

---

Always read the release notes!

- ▶ Even more important, read the **upgrade notes**!
  - Upgrade notes can contain “breaking changes”
  - Prevent (future) problems

**ZABBIX '25**  
CONFERENCE  
BENELUX

# Challenging upgrade

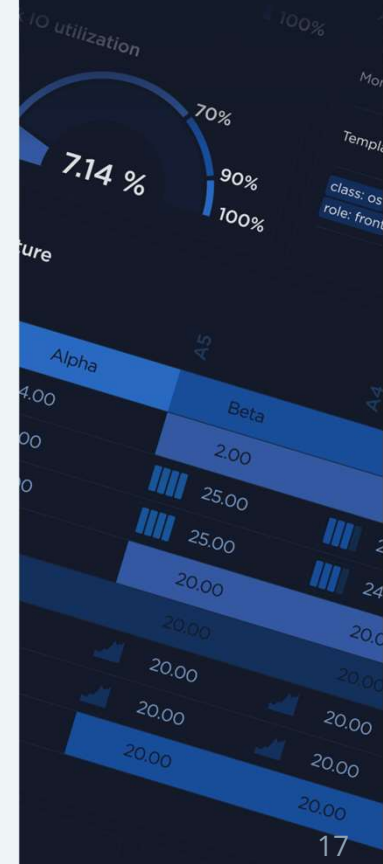

# “Zero downtime” migration [pgsql]

---

Build new server, new database release

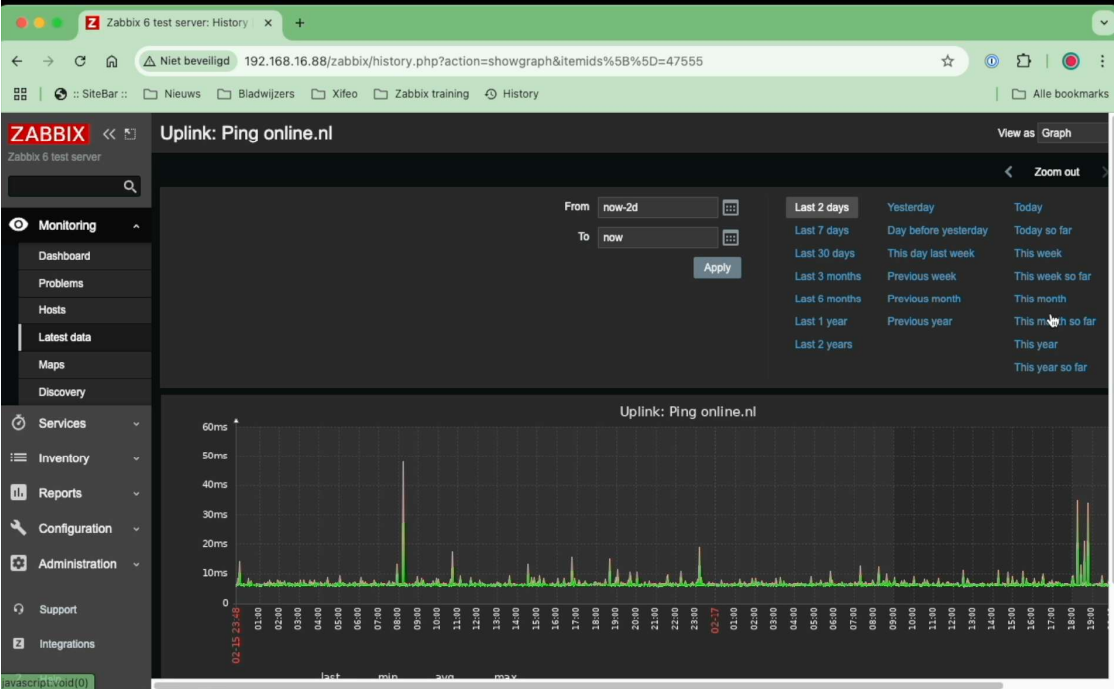

- ▶ Export pg\_dump with TimescaleDB => no history & trends data
  - Export history & trends to CSV
  - Data uncompressed = **lots of storage** needed!
- ▶ Import without history & trends = fast
  - Implementation & test Zabbix 7 starts immediately!
- ▶ Import history & trends after 3 weeks (go-live)
  - Takes time, but no downtime Zabbix 6 or 7!

ZABBIX '25

**THE PROBLEM WITH TROUBLESHOOTING**

**IS THAT TROUBLE SHOOTS BACK.**

imgflip.com

Some anecdotes

# Backups

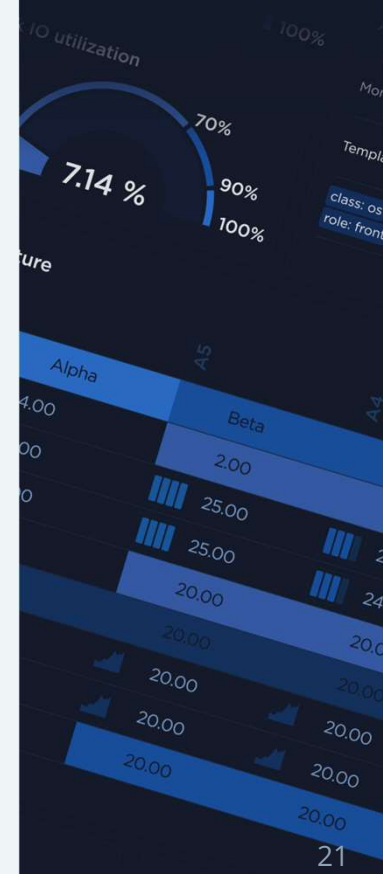

---

Don't forget backups!

- ▶ A lot of non-backed up installations
- ▶ Snapshot is not a backup!
- ▶ Full backup / config backup

**ZABBIX '25**  
CONFERENCE  
BENELUX

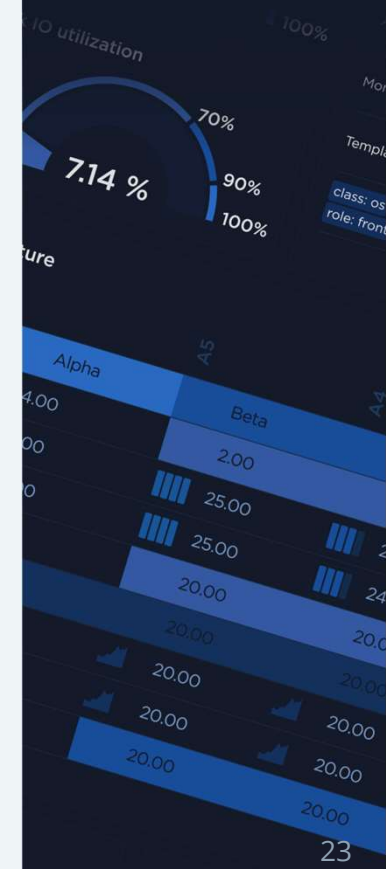

Turn off alerting!
