Zabbix Browser Recorder

Zabbix Browser Recorder

Zabbix Browser Recorder est une extension navigateur qui permet d'enregistrer un parcours utilisateur réel sur un site web, puis de générer automatiquement un template YAML prêt à importer dans Zabbix pour créer un scénario de supervision de type Browser.

L'objectif est simple : passer de "je navigue sur mon site" à "j'ai une supervision fonctionnelle dans Zabbix", sans devoir écrire manuellement le script, les items, déclarer les captures et les performances ou même créer le

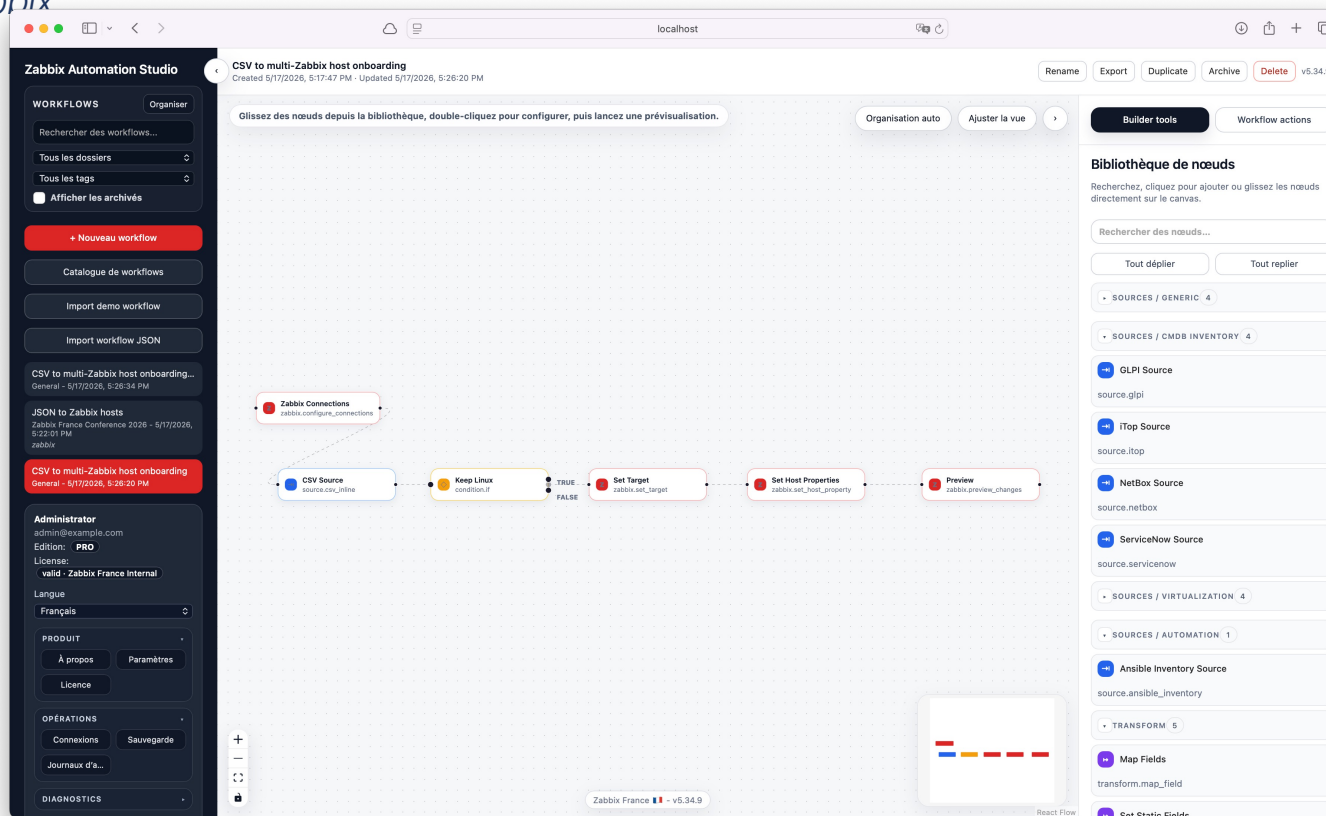

The image displays the Zabbix Browser Recorder interface, which is used to record user journeys on a website and generate Zabbix monitoring scenarios. The interface is divided into several sections:

- Recorded steps:** A list of recorded actions, such as "open | https://www.zabbix.com/", "Performance measurement (Main page)", "Screenshot", "Click | link=Start Monitoring", "open | https://www.zabbix.com/cloud", "Performance measurement (Start monitoring)", "Screenshot", "Click | link=Try Zabbix Cloud", and "open | https://cloud.zabbix.com?utm_campaign=zabbix_cloud&utm_source=website&utm_medium=header". Each step includes a "Perf" checkbox and a "Screenshot" checkbox, along with a "Start" button and a "Stop" button.
- Zabbix YAML template:** A section for generating a YAML template from the recorded journey, screenshots, checks, and performance steps. It includes an "Export YAML template" button, a "Save scenario" button, and a "Load scenario" button.
- How it works:** A section explaining the process: "1. Start recording and browse normally.", "2. Review the journey in the editor.", "3. Generate the Zabbix script or export."
- Scenario ready for review:** A section with three buttons: "Start recording", "Stop recording", and "Review scenario".
- Tip:** A tip stating: "Tip: record the shortest useful journey first, then add checks in the editor."
- Zabbix France v1.6.16:** The version and branding information.

Zabbix Automation Studio

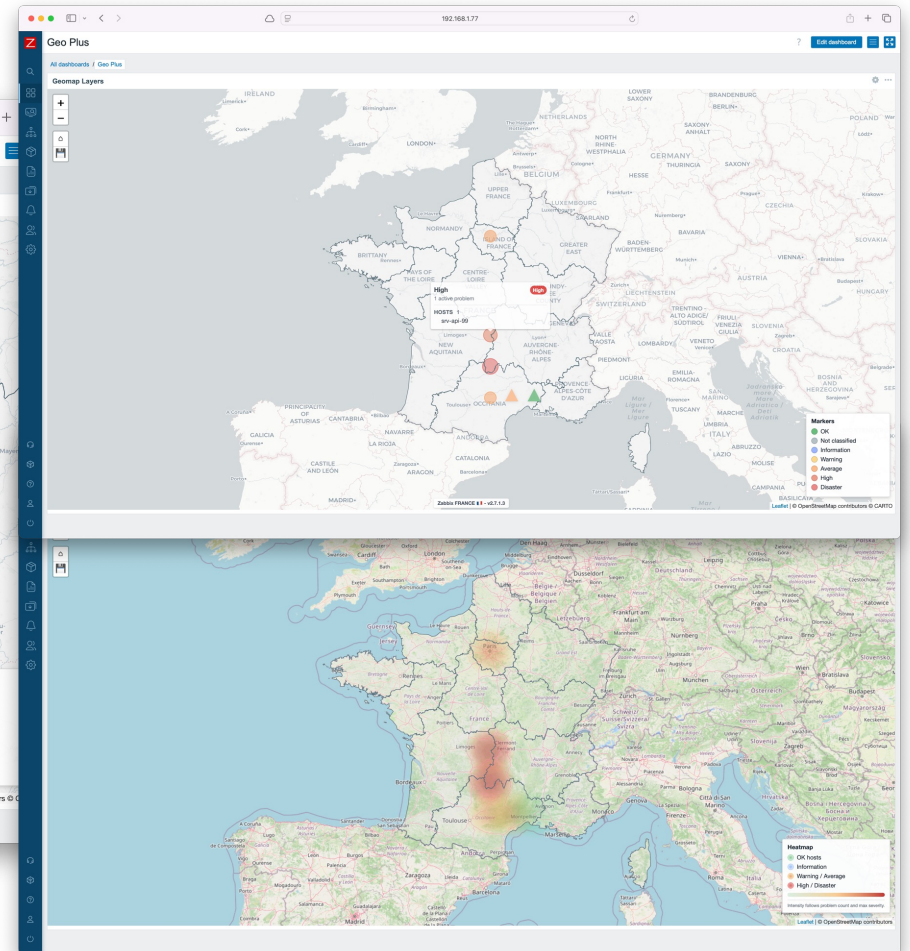

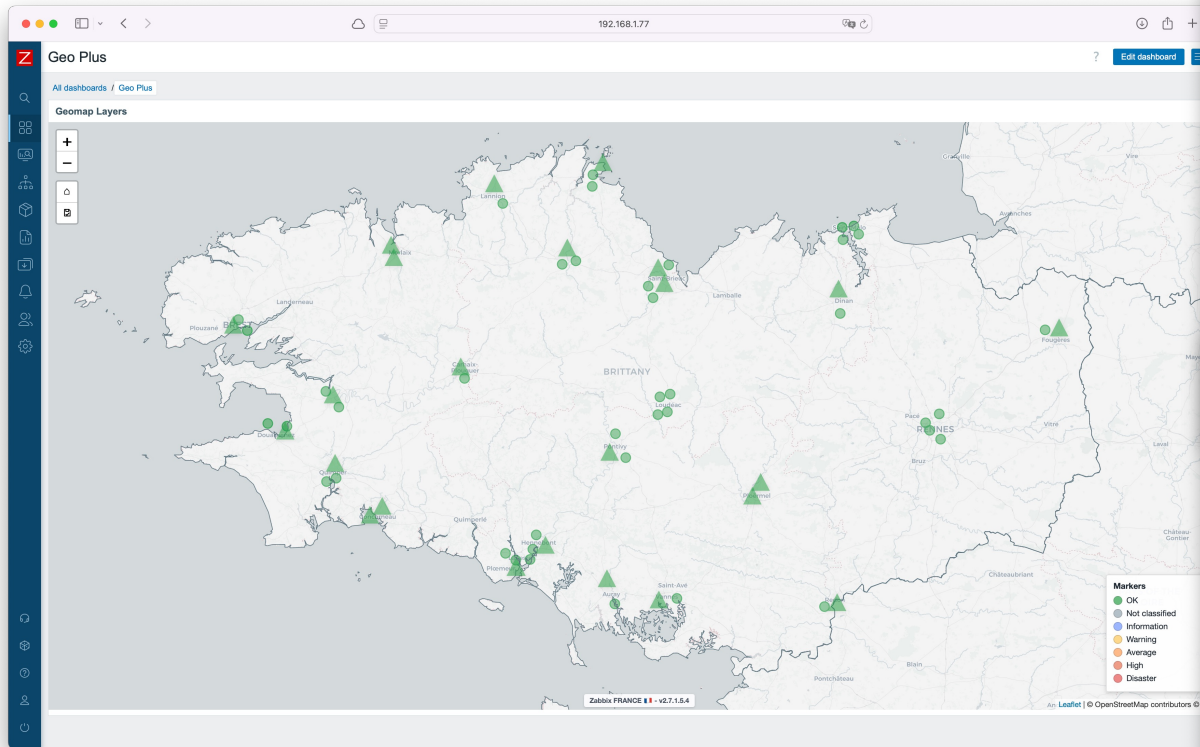

Zabbix Automation Studio

Zabbix Automation Studio, ou ZAS, est un outil que nous avons développé pour simplifier et sécuriser l'automatisation autour de Zabbix
