

ZABBIX

THE MONITORING SOLUTION YOU NEED

Zabbix is a universal all-in-one solution that offers real-time monitoring of your entire infrastructure and is completely open-source. Designed with enterprise needs in mind, the software provides a comprehensive single pane of glass view of your environment regardless of its size. With the option of deploying the platform on-premise or in the cloud you are always fully in control of your data.

Monitor anything - be that servers, network, applications, virtual machines etc., as long as it's possible to connect to them ia the internet or internal networks, Zabbix can gather data.

Cloud resources	 Microsoft Azure	 amazon web services	 Google Cloud Platform				
Applications	Any application & services						
Middleware	 MySQL	 ORACLE	 APACHE HTTP SERVER PROJECT	 docker	 php	 Apache Tomcat	 JBoss by Red Hat
OS	 Linux UNIX	 Mac	 AIX	 solaris	 Windows	 FreeBSD	
Network	 Router	 IN	 OUT				
Hardware							

How it works?

Once deployed, Zabbix will automatically detect problem states in your infrastructure, which you can customize specifically according to your needs. Based on the problem conditions you can have Zabbix notify you and display all the relevant information in the dashboard, or even automatically fix the issue, so you don't have to.

So how it all works

- On-premise and cloud deployment versatility
- Automatic network discovery for seamless onboarding
- Agent-based and agent-less options
- Plug and play templates
- Flexible alerting and escalation
- Auto-remediation
- Excellent scalability and distributed monitoring
- SAML Single-Sign-On
- Granular permissions for a multi-tenant environment
- Fully customizable UI
- IoT ready
- Webhooks and API for out-of-the-box integrations

Commitment

As the sole company behind the product, Zabbix provides continuous development and version updates to keep your monitoring needs satisfied. In addition to that, there are also professional services delivered directly or via an extensive range of partners to see you through deployment or migration from a legacy tool, training to get your team fully up to speed with Zabbix and 24/7 technical support available worldwide.
