Can you please do a video on Zabbix Proxy and how to handle a failure whereby it triggers alerts for devices behind said proxy? How do you stop the cascade of alerts?

Rob wylde 5 months ago
Really starting to enjoy these videos. Keep it up. Thanks

Markus Fischbacher 1 month ago
Sound near perfect this time! Thumbs up

Hi Dmitry, really nice video. Thanks for sharing - just one query like I understand, we need to upgrade all client agents as well at the same time once server is successfully upgraded.

Dmitry Lambert 2 months ago
Agents are backward compatible. You can upgrade them later, or don't upgrade at all.

TIMESCALEDB EXTENSION IS A VERY PROMISING TECHNOLOGY.

IT WORKS WELL WITH ZABBIX AND GIVES SOME QUITE NOTICEABLE ADVANTAGES OVER RUNNING ZABBIX WITH STANDARD POSTGRESQL DATABASE.

There are some methods for installing Zabbix with high availability. We decided to think out of the box.

Excited to show a Zabbix environment in Docker Swarm where enables high availability and scalability including between different regions.

Over 5k of hosts, 280k of items, 450 nvp5s.
