MIRACLE

Case study : Zabbix – Telecom industry(1)

Objects : NW Switches 300

Items : 50,000 (Interval:5 minutes)

Zabbix server info

- Zabbix Version : Zabbix1.8.3
- OS : Asianux Server 3 ==MIRACLE LINUX V5 SP3
- HW Spec
 - CPU : Xeon E5540 (2.5GHz / 4core) 1CPU
 - Memory : 12GB

User info

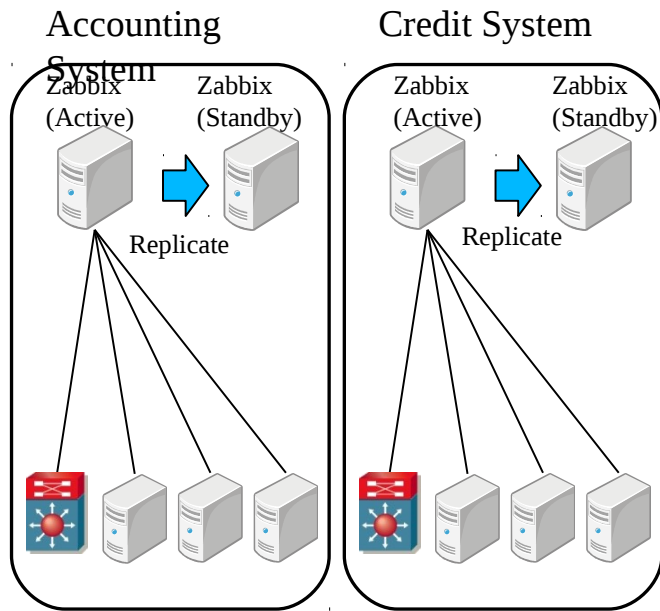

- Place : Osaka
- Special instruction : This case example is for Telecom firm in Western Japan, and MIRACLE LINUX is building another system for Telecom firm in East Japan on a larger scale.

Feature

- Originally implemented Zabbix1.8.2 by System Integrator, and reimplemented Zabbix1.8.3 by MIRACLE LINUX in order to improve performance and avoid bug occurred with Zabbix1.8.2.
- Objects are number of 300 of NW switches , and Zabbix Server
- Monitoring : SNMP polling / ICMP Ping
- Increased system availability by Active-Active structure.(The base of this code was taken in Zabbix-1.8.12.)

backup

Case study : Zabbix – Telecom industry(2)

Objects : Server 1300 over, NW Switches 300
Zabbix Server : 15 over

Zabbix server info

- Zabbix Version : Zabbix1.6.8/1.8.3
- OS : CentOS
- HW Spec : Differs for each service

User info

- Place : Tokyo
- It was dispatched at a time to this project by several persons from the group company, and was in charge of introduction in the team.
- Special instruction
 - In order to unite with operation, the sort function of an obstacle, etc. are developed.

Feature

- Built Zabbix server for each service.
 - Since the scale was large, it divided into two or more servers.
- Supervisory service was replaced one by one over one year. → ML takes charge of development, education, and construction.
- Increased system availability by Active-Standby structure.(heartbeat, MySQL Replication)

Case study : Digital Sign age

■ Uniqlo :Flagship store in NYC
2011.Oct.14 Store open
in 5th ave
