 - Proud to accomplish tasks using *exclusively* **Open-Source** software
 - Been using **Zabbix** since 2004, version 1.0
 - Main partners: **HP, IBM** and **EMC**
-

About

PlanetMon is a monitoring web-platform **based on Zabbix** that aims to bring our favourite software from the enterprise to the **public world**.

- **Cut to be easy:** *We have to rethink the way we monitor, common people aren't necessarily interested in details and customization. They need to retrieve basic info in a fast way!*
- **Pro-active:** *Notifications is all we need if we can fix things. But here the game changes, we want to assist people, with help remote/on-site services they can request.*
- **Experts network:** *We want to create a network of IT companies with different levels of expertise, in order to support every kind of customers*
