

# ZABBIX in the future.

## ABOUT ME

Name is Kaz (inaba@Kazsansan)

Born in Japan , which is far from here.

I work as a systems engineer, mainly creating IT infrastructure.

And this is the 6<sup>th</sup> conference.

Wow! It's incredible

I have been here 6<sup>th</sup> times ! :)

I love watching talk shows. I am crazy  
about them.

For example

The 6

I'm always watching all of them, so I know quite well what's going on all over the world!

Also

There is lots of animation made in my country. I got a sick of seeing all the time. Maybe you will be too.

It's just the way it is.

If you want to wear costumes  
like these,  
you can get away with that  
in Japan.

# My topics

## Agenda

1. ZABBIX in the future

What is the future of ZABBIX?

I gave it my best shot.

Now my point is  
it's very important to monitor and to detect  
errors automatically, instead of manually  
by human beings. we let ZABBIX do all  
of them.

So, one of the solutions is to use AI  
(Artificial intelligence.)

I think it works.

It's very essential to leave to ZABBIX all of  
the tasks we have to check, and of course  
to predict in the future by monitoring.

It's like a wizard and ...

it's like The Simpsons.

# THE SIMPSONS

FOX PREMIERES SUNDAY, SEPT. 30 AT 8:00 PM

## Season 29

## 1 SEASON 21 EPISODES

THE SIMPSONS continues to strike a chord with viewers for irreverently poking fun at anything and everything.

[▶ Start Watching S29 E1](#)

I think we need this function.  
Automatically ZABBIX, can check the  
messages from them. We don't need to  
take a look at the errors personally.  
AI will have to deal with them.

And more,  
the idea is to place the solution into  
humanoid body using AI.  
That is a robot with AI.  
I imagined.

# ZABBIX Robot

This is an image.

Functions

(like human beings )

- Watching
- Seeing
- Listening
- Speaking
- Predicting
- Of course monitoring everything

It's like a mother  
checking the system in a  
Data center, something  
like that.

But...

What's going on if it is used badly?

It's hard to think about it.

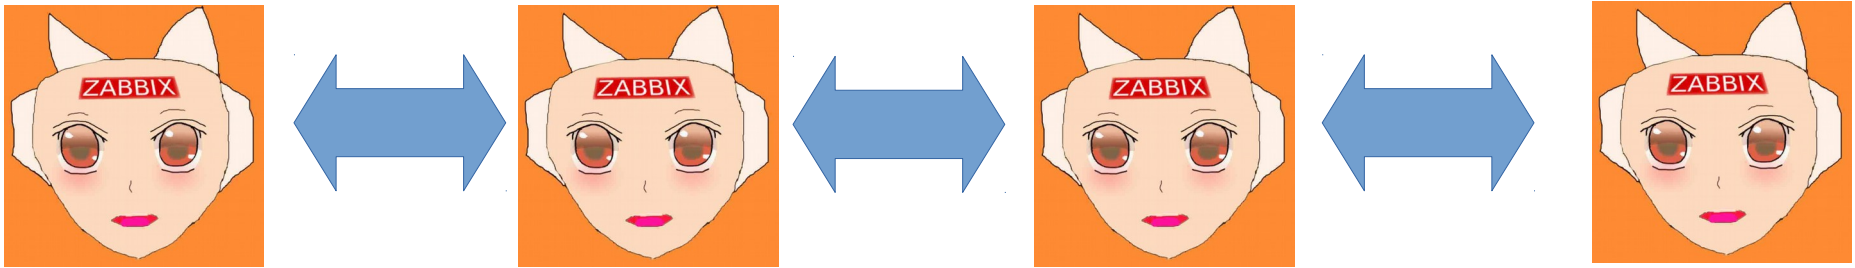

Finally ,this is the one of the solutions I found.

That is a .....

# BLOCK CHAIN

(realizing the governments by the robot for the robot)

It allows them to share  
information with each other and  
detect lots of errors immediately.

I think it works.

It's possible.

Although these ideas are like a daydream, it is very important to think and imagine the future we need.

Yes it's very essential for us.

That's what I did.

It's just around the corner.

This is much more wonderful  
thinking about them  
than considering.....

a space force  
, which someone said should  
developed.

The door of the future has already  
been opened up.

Let's enjoy ZABBIX.

OK Thank-you.
