# ZABBIX 4.4

**UNLIMITED CAPABILITIES IN AN
ALL-IN-ONE MONITORING SOLUTION**

Zabbix 4.4 Released!

Zabbix team is pleased to announce the release of **Zabbix 4.4**. The new version of the monitoring solution comes with a long list of new features, significant improvements and advanced visualization options.

- Zabbix 4.4 introduces **a new type of agent**, zabbix_agent2, which offers a pluggable architecture along with a wide range of new capabilities and advanced monitoring functions.

- Programmable logic for creating and sharing efficient two-way **integrations with 3rd party ITSM**, alerting and notification systems.

- We introduced a set of standards and well-defined **guidelines for templates**. It is crucial to have a common ground for all creators and maintainers of templates and also for all Zabbix users.

- All **metrics and triggers** can be now **documented** to provide DevOps and NOC engineers with up-to-date information in order to speedup analysis and problem resolution.

- Now Zabbix can be easily deployed as a container or as a ready to use image for **various cloud providers**: AWS, Azure, Google Cloud, Digital Ocean, Docker.
