New Official Integrations Available

Zabbix 5.0 is on the final stage of the development. It will come with lots of long-awaited features and improvements, as well as with the official ready-to-use integration templates. Here is the list of the recently released integrations designed for the upcoming Zabbix version.

Zabbix + IPMI. IPMI provides management and monitoring capabilities independently of the host system's CPU, firmware and operating system. The new template allows collecting all metrics at once, thanks to Zabbix's bulk data collection. It collects metrics by polling BMC remotely using an IPMI agent.

Zabbix + Jira. Jira is a proprietary issue tracking product that allows bug tracking and agile project management. Explore the official guide describing how to integrate Zabbix with Jira using the Zabbix webhook feature.

Zabbix + Microsoft Teams. Microsoft Teams is a unified communication and collaboration platform that combines persistent workplace chat, video meetings, file storage, and application integration. Learn how to integrate Zabbix with MS Teams.

Zabbix + Zendesk. Zendesk is an omnichannel ticketing system that is a shared inbox for all your customer inquiries. Zendesk webhook integration with Zabbix works in the following way: If a trigger fires, Zabbix will send an event to service in Zendesk. Event from Zabbix will trigger a new incident on the Zendesk service.

Zabbix + Memcached. Memcached is a general-purpose distributed memory caching system. Feel free to use the official template to monitor the Memcached server by Zabbix. Most of the metrics are collected in one go, thanks to Zabbix bulk data collection.

Zabbix + Redmine. Redmine is a free and open-source, web-based project management and issue tracking tool. The official guide describes how to integrate a Zabbix installation with Redmine and provide instructions on setting up a media type, a user, and an action in Zabbix.

Join Zabbix Webinars

Apr 14, Zabbix + Prometheus: Zabbix data collection from Prometheus exporters (EN/RU)

Apr 23, Zabbix performance tuning: 100K of checks per second on a single server (EN/RU)

Apr 16, Install Zabbix in 5 minutes (EN/RU)

Apr 23, Zabbix API (CH)

Apr 15, NEW: Data visualization with Zabbix (EN/RU)

Apr 29, Communicating with Zabbix using API: create your first integration (EN/RU)

Apr 16, Recolecta cualquier tipo de información con Zabbix: aprovecha el pre-procesamiento de los datos (ES)

Apr 30, Migration to the latest release, avoiding common pitfalls (EN/RU)

Apr 21, Advanced problem detection with Zabbix (EN/RU)

May 5, NEW: Data visualization with Zabbix (EN/RU)
