

**ZABBIX 5.0**FREEDOM AND INTEGRITY  
OF MONITORING

## Zabbix 5.0 Released!

**Zabbix Team is pleased to announce the release of Zabbix 5.0 LTS! It comes with a list of significant improvements in usability, security, and integrity.**

Zabbix can now be deployed [on-premise](#) and [in the cloud](#). It is available on the latest releases of platforms, containers, and Linux distros from RedHat/IBM, SuSE, Ubuntu. Now one-click Zabbix deployment is also available on [Azure](#), [AWS](#), [Google Cloud](#), [IBM/RedHat Cloud](#), [Oracle](#), and [Digital Ocean](#). Zabbix technical support services are now offered at Red Hat and Azure Marketplaces.

Moreover, the Zabbix monitoring tool provides numerous out-of-the-box [integrations](#) with messengers, ticketing, and alerting systems.

### Explore more new features:

- **Automation and discovery:** Automated discovery of hardware components, Windows-related resources, and advanced discovery of Java metrics have been added into the new release.
- **Scalability:** Zabbix UI has been optimized to simplify the monitoring of millions of devices.
- **The new Zabbix monitoring agent gets an 'officially supported' status.** The new extendable agent provides advanced functionality for most demanding customers and complex use cases.
- **Significant security enhancements:** The new improvements guarantee that all Zabbix components communicate in a secure way and also use secure protocols for outbound communications without affecting performance in any way.
- **Compression for TimescaleDB:** The time-series data compression helps increase performance and efficiency while lowering operational costs.
- **Usability improvements:** The new release is optimized for wide screens and also introduces support for 3rd party UI modules among other enhancements of Zabbix UI.
